Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information

professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

Hollywood Science Sidney Perkowitz, 2010-02-22 In this book a scientist and dedicated film enthusiast discusses the portrayal of science in more than one hundred films including science fiction scientific biographies and documentaries Beginning with early films like Voyage to the Moon and Metropolis and concluding with more recent offerings like The Matrix War of the Worlds A Beautiful Mind and An Inconvenient Truth Sidney Perkowitz questions how much faith we can put into Hollywood's depiction of scientists and their work how accurately these films capture scientific fact and theory whether cataclysms like our collision with a comet can actually happen and to what extent these films influence public opinion about science and the future Bringing together history scientific theory and humorous observation Hollywood Science features dozens of film stills and a list of the all time best and worst science fiction movies

the theory and the practice the book covers subjects as diverse as androids biotech electronic commerce the acceleration of everyday life access to information the alliance between the military and the entertainment industries feminism democratic practice and human consciousness itself Together the essays divided into separately introduced sections on society culture politics and economics present a systematic and state of the art overview of technology and society in the 21st Century Contributors John Armitage Verena Andermatt Conley James Der Derian William H Dutton Phil Graham Tim Jordan Wan Ying Ling David Lyon Ian Miles Joanne Roberts Saskia Sassen Cathryn Vasseleu McKenzie Wark Frank Webster

Family Communication about Genetics Clara L. Gaff, Carma L. Bylund, 2010 Genetics is in all senses a family affair The diagnosis of a genetic condition affects not only the patient and biological family members who may themselves be at risk but also family more generally as support may be sought from those considered kin and who may or may not be at risk themselves It is considered best practice in genetic consultations to explore who will be informed within the family when a genetic condition or risk is diagnosed particularly when the health of other family members is at risk There is little guidance or consensus on how to achieve the implicit goal of informed family members while respecting patient confidentiality however There is a need for practitioners to be aware of the dynamics of family communication and to have guidance about how they may sensitively facilitate communication about genetics within families This handbook facilitates the development of clinical practices relating to family communication about genetics Relevant theories of family communication are summarized and related to a clinical genetics milieu and from this frameworks for practitioners are presented A book of this nature is particularly timely as the completion of the Human Genome Project will result in an unprecedented amount of information about genetic constitution and health risks becoming available to individuals and their families The presence of a potentially genetic condition in a family is not a new phenomenon However the growth in testing for genetic conditions common complex conditions and variants that may influence health as well as drug metabolism means that a greater number of individuals will face decisions about communicating this information to their relatives Many health professionals in all levels of health care will be confronted with issues of responsibility and practice in family communication about genetic information as they become providers of this testing

Critical Race Narratives Carl Gutierrez-Jones, 2001-08 An immensely valuable contribution As the last generation of witnesses to the Holocaust testify to its horrors they must also testify to its heroes those who risked all to save lives These movingly told stories restore our faith in the human spirit William Shirer The mystery of the rescue phenomenon will probably always elude us As the rescuers narratives in this remarkable volume show the acts of saving Jews seemed spontaneous and natural and thus the mystery of the rescue act begins to unravel radiantly The insights which this interdisciplinary collection of essays subtly pieces together show in unique fashion the preconditions or the possibilities of individual and collective courage Dennis B Klein author of Jewish Origins of the Psychoanalytic Movement A distinguished group of internationally known individuals Jews and non Jews rescuers and rescued offer their enriching first

person accounts and reflections that explore the question Why did the Danes risk their lives to rescue the Jewish population

Designing Babies Robert Klitzman, 2019-09-09 Since the first test tube baby was born over 40 years ago In Vitro Fertilization and other Assisted Reproductive Technologies ARTs have advanced in extraordinary ways producing millions of babies An estimated 20% of American couples use infertility services to help them conceive and that number is growing Such technologies permit thousands of people including gay and lesbian couples and single parents to have offspring Couples can now transmit or avoid passing on certain genes to their children including those for chronic disease and probably sometime soon height and eye color as well Prospective parents routinely choose even the sex of their future child and whether or not to have twins The possibilities of this rapidly developing technology are astounding especially in the United States where the procedures are practically unregulated and a large commercial market for buying and selling human eggs is swiftly growing New gene editing technology known as CRISPR allows for even more direct manipulation of embryos genes As these possibilities are increasingly realized potential parents doctors and policy makers face complex and critical questions about the use or possible misuse of ARTs Designing Babies confronts these questions examining the ethical social and policy concerns surrounding reproductive technology Based on in depth interviews with providers and patients Robert Klitzman explores how individuals and couples are facing quandaries of whether when and how to use ARTs He articulates the full range of these crucial issues from the economic pressures patients face to the moral and social challenges they encounter as they make decisions which will profoundly shape the life of their offspring In doing so he reveals the broader social and biological implications of controlling genetics ultimately arguing for closer regulation of procedures which affect the lives of generations to come and the future of our species as a whole
