Designing Babies Robert Klitzman, 2019-09-09 Since the first test tube baby was born over 40 years ago In Vitro Fertilization and other Assisted Reproductive Technologies ARTs have advanced in extraordinary ways producing millions of babies An estimated 20% of American couples use infertility services to help them conceive and that number is growing Such technologies permit thousands of people including gay and lesbian couples and single parents to have offspring Couples can now transmit or avoid passing on certain genes to their children including those for chronic disease and probably sometime soon height and eye color as well Prospective parents routinely choose even the sex of their future child and whether or not to have twins The possibilities of this rapidly developing technology are astounding especially in the United States where the procedures are practically unregulated and a large commercial market for buying and selling human eggs is swiftly growing New gene editing technology known as CRISPR allows for even more direct manipulation of embryos genes As these possibilities are increasingly realized potential parents doctors and policy makers face complex and critical questions about the use or possible misuse of ARTs **Designing Babies** confronts these questions examining the ethical social and policy concerns surrounding reproductive technology Based on in depth interviews with providers and patients Robert Klitzman explores how individuals and couples are facing quandaries of whether when and how to use ARTs He articulates the full range of these crucial issues from the economic pressures patients face to the moral and social challenges they encounter as they make decisions which will profoundly shape the life of their offspring In doing so he reveals the broader social and biological implications of controlling genetics ultimately arguing for closer regulation of procedures which affect the lives of generations to come and the future of our species as a whole

Human Flourishing in an Age of Gene Editing Erik Parens, Josephine Johnston, 2019-07-29 International uproar followed the recent announcement of the birth of twin girls whose genomes had been edited with a breakthrough DNA editing technology This technology called clustered regularly interspaced short palindrome repeats or CRISPR Cas9 can alter any DNA including DNA in embryos meaning that changes can be passed to the offspring of the person that embryo becomes Should we use gene editing technologies to change ourselves our children and future generations to come The potential uses of CRISPR Cas9 and other gene editing technologies are unprecedented in human history By using these technologies we eradicate certain dreadful diseases Altering human DNA however raises enormously difficult questions Some of these questions are about safety Can these technologies be deployed without posing an unreasonable risk of physical harm to current and future generations Can all physical risks be adequately assessed and responsibly managed But gene editing technologies also raise other moral questions which touch on deeply held personal cultural and societal values Might such

technologies redefine what it means to be healthy or normal or cherished Might they undermine relationships between parents and children or exacerbate the gap between the haves and have nots The broadest form of this second kind of question is the focus of this book What might gene editing and related technologies mean for human flourishing In the new essays collected here an interdisciplinary group of scholars asks age old questions about the nature and well being of humans in the context of a revolutionary new biotechnology one that has the potential to change the genetic make up of both existing people and future generations Welcoming readers who study related issues and those not yet familiar with the formal study of bioethics the authors of these essays open up a conversation about the ethics of gene editing It is through this conversation that citizens can influence laws and the distribution of funding for science and medicine that professional leaders can shape understanding and use of gene editing and related technologies by scientists patients and practitioners and that individuals can make decisions about their own lives and the lives of their families *Roger Ebert's Movie Yearbook, 1999* Roger Ebert, 1998 Presents detailed descriptions and reviews of virtually every movie that has opened nationally over the past year reports from the major film festivals interviews with important movie figures and essays on the movie world **Bioethics** Nancy S.
