Complex and Differential Geometry

Wolfgang Ebeling, Klaus Hulek, Knut Smoczyk, 2011-06-27 This volume contains the Proceedings of the conference Complex and Differential Geometry 2009 held at Leibniz Universität Hannover September 14-18, 2009. It was the aim of this conference to bring specialists from differential geometry and complex algebraic geometry together and to discuss new developments in and the interaction between these fields. Correspondingly the articles in this book cover a wide area of topics ranging from topics in classical algebraic geometry through complex geometry including holomorphic symplectic and Poisson geometry to differential geometry with an emphasis on curvature flows and topology.

A Course in Real Algebraic Geometry Claus Scheiderer, 2024-09-12 This textbook is designed for a one year graduate course in real algebraic geometry with a particular focus on positivity and sums of squares of polynomials. The first half of the book features a thorough introduction to ordered fields and real closed fields including the Tarski-Seidenberg projection theorem and transfer principle. Classical results such as Artin's solution to Hilbert's 17th problem and Hilbert's theorems on sums of squares of polynomials are presented in detail. Other features include careful introductions to the real spectrum and to the geometry of semialgebraic sets. The second part studies Archimedean positivstellensätze in great detail and in various settings together with important applications. The techniques and results presented here are fundamental to contemporary approaches to polynomial optimization. Important results on sums of squares on projective varieties are covered as well. The last part highlights applications to semidefinite programming and polynomial optimization including recent research on semidefinite representation of convex sets. Written by a leading expert and based on courses taught for several years, the book assumes familiarity with the basics of commutative algebra and algebraic varieties as can be covered in a one semester first course. Over 350 exercises of all levels of difficulty are included in the book.

Basic Algebraic Geometry I.R. Shafarevich, 2012-12-06 Algebraic geometry occupied a central place in the mathematics of the last century. The deepest results of Abel, Riemann, Weierstrass, many of the most important papers of Klein and Poincaré belong to this domain. At the end of the last and the beginning of the present century the attitude towards algebraic geometry changed abruptly. Around 1910 Klein wrote: "When I was a student Abelian functions as an after effect of Jacobi's tradition were regarded as the undisputed summit of mathematics and each of us as a matter of course had the ambition to forge ahead in this field." And now? The young generation hardly knows what Abelian functions are. Vorlesungen über die Entwicklung der Mathematik im XIX Jahrhundert Springer Verlag Berlin 1926 Seite 312. The style of thinking that was fully developed in algebraic geometry at that time was too far removed from the set-theoretical and axiomatic spirit which then determined the development of mathematics. Several decades had to lapse before the rise of the theory of topological differentiable and complex manifolds, the general theory of fields, the theory of ideals in sufficiently general rings and only then it became possible to construct algebraic geometry on the basis of the principles of set

Differential Equations with Applications and Historical Notes George F. Simmons,2016-11-17 Fads are as common in mathematics as in any other human activity and it is always difficult to separate the enduring from the ephemeral in the achievements of one's own time An unfortunate effect of the predominance of fads is that if a student doesn't learn about such worthwhile topics as the wave equation Gauss's hypergeometric function the gamma function and the basic problems of the calculus of variations among others as an undergraduate then he/she is unlikely to do so later The natural place for an informal acquaintance with such ideas is a leisurely introductory course on differential equations Specially designed for just such a course Differential Equations with Applications and Historical Notes takes great pleasure in the journey into the world of differential equations and their wide range of applications The author a highly respected educator advocates a careful approach using explicit explanation to ensure students fully comprehend the subject matter With an emphasis on modeling and applications the long awaited Third Edition of this classic textbook presents a substantial new section on Gauss's bell curve and improves coverage of Fourier analysis numerical methods and linear algebra Relating the development of mathematics to human activity i.e. identifying why and how mathematics is used the text includes a wealth of unique examples and exercises as well as the author's distinctive historical notes throughout Provides an ideal text for a one or two semester introductory course on differential equations Emphasizes modeling and applications Presents a substantial new section on Gauss's bell curve Improves coverage of Fourier analysis numerical methods and linear algebra Relates the development of mathematics to human activity i.e. identifying why and how mathematics is used Includes a wealth of unique examples and exercises as well as the author's distinctive historical notes throughout Uses explicit explanation to ensure students fully comprehend the subject matter Outstanding Academic Title of the Year Choice magazine American Library Association Oswaal CBSE Question Bank Class 12 Chemistry, Chapterwise and Topicwise Solved Papers For Board Exams 2025
