Biologically-Inspired Computing for the Arts: Scientific Data through Graphics Ursyn, Anna, 2012-04-30 This

book comprises a collection of authors individual approaches to the relationship between nature science and art created with the use of computers discussing issues related to the use of visual language in communication about biologically inspired scientific data visual literacy in science and application of practitioner s approach Provided by publisher **Nexus Network Journal 9,2** ,2008-12-18 This volume is dedicated to Mechanics in Architecture that is the science of structural mechanics including the behaviour of structures internal forces and deformation as well as the development of new structural systems to resist thrusts as a result of new architectural forms It is a field of enquiry that examines a particular aspect of the relationships between architecture and the mathematical sciences Some of the papers in this issue were presented at the Nexus 2006 conference during a special session dedicated to mechanics Other research papers focus on an eighteenth century Belgian pyramid aspects of fractal architecture and properties of a family of irrational values The issue also includes a description and evaluation of a university level course in architecture and mathematics Rachel Fletcher s Geometer s Angle column and book reviews "Golden" Non-euclidean Geometry, The: Hilbert's Fourth Problem, "Golden" Dynamical Systems, And The Fine-structure Constant Alexey Stakhov, Samuil Aranson, 2016-07-14 This unique book overturns our ideas about non Euclidean geometry and the fine structure constant and attempts to solve long standing mathematical problems It describes a general theory of recursive hyperbolic functions based on the Mathematics of Harmony and the golden silver and other metallic proportions Then these theories are used to derive an original solution to Hilbert s Fourth Problem for hyperbolic and spherical geometries On this journey the book describes the golden qualitative theory of dynamical systems based on metallic proportions Finally it presents a solution to a Millennium Problem by developing the Fibonacci special theory of relativity as an original physical mathematical solution for the fine structure constant It is intended for a wide audience who are interested in the history of mathematics non Euclidean geometry Hilbert s mathematical problems dynamical systems and Millennium Problems See Press Release Application of the mathematics of harmony Golden non Euclidean geometry in modern math *Masters of Mathematics* Robert A. Nowlan, 2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It s not about solving

algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics

Structure and Form in Design Michael Hann, 2014-02-13 This book provides a critical examination of structure and form in design covering a range of topics of great value to students and practitioners engaged in any of the specialist decorative arts and design disciplines The complexities of two dimensional phenomena are explained and illustrated in detail while various three dimensional forms are also discussed In the context of the decorative arts and design structure is the underlying framework and form the resultant visible two or three dimensional outcome of the creative process Whether hidden or visually detectable in the final design structure invariably determines whether or not a design is successful in terms of both its aesthetics and its practical performance Hann successfully identifies various geometric concepts and presents and discusses a number of simple guidelines to assist the creative endeavours of both accomplished and student practitioners teachers and researchers

revelations to twist even experienced numerologists around We then follow chapter by chapter journey after journey as you travel deeper and finally walk away with a new set of eyes that will make the world around seem so different But beware once you start seeing the patterns you can't unsee them Your perception of reality will shift and you'll discover a new level of synchronicity in your life that you never thought possible Are you ready to decode the secret language of the universe To understand the divine messages that have been hiding in plain sight all along To unlock your full potential and align with your true cosmic purpose The universe is speaking It's time to listen Pick up *Angel Numbers Decoded Numerology Spirituality and Awakening through the Universe's Secret Language* today and embark on the most important spiritual journey of your life The answers you've been searching for are waiting to be discovered in the numbers all around you *Angel Numbers Spirituality Numerology Divine Guidance Manifestation Cosmic Wisdom Spiritual Awakening* Don't let another divine message go unnoticed Grab your copy now and start decoding the universe's secret language today *The Art of Illustrated Maps* John Roman, 2015-09-25 While literally hundreds of books exist on the subject of cartographic maps *The Art of Illustrated Maps* is the first book EVER to fully explore the world of conceptual imaginative mapping Author John Roman refers to illustrated maps as the creative nonfiction of cartography and his book reveals how and why the human mind instinctively recognizes and accepts the artistic license evoked by this unique art form Drawing from numerous references *The Art of Illustrated Maps* traces the 2000 year history of a specialized branch of illustration that historians claim to be the oldest variety of primitive art This book features the dynamic works of many professional map artists from around the world and documents the creative process as well as the inspirations behind contemporary 21st century illustrated maps *Plato's Timaeus and the Missing Fourth Guest* Donna M. Altimari Adler, 2019-12-02 In *Plato's Timaeus and the Missing Fourth Guest* Donna M Altimari Adler proposes a new Timaeus scale structure She finds the harmonic cosmos mathematically at 35 A 36 D regarding the text as a number generator Plato's primary number sequence she argues yields a matrix defining a sophisticated harmony of the spheres She stresses the Decad as the pattern governing both human perception and the generation of all things in the Timaeus including the World Soul and musical scale symbolizing it She precisely identifies Plato's fabric and its locus of severance and solves other thorny problems of textual interpretation *The Mystery of Numbers: Revealed Through Their Digital Root* Talal Ghannam, 2012-07-04 What is it that brings all these different things together The subatomic particles and the Vedic square The hydrogen atom and the golden section Fibonacci numbers consciousness and alchemy Nikola Tesla music and the ether Electromagnetism gravity and the fourth dimension The procession of the equinox the Mayan dooms day the Hindu Brahma cycle and Atlantis It is Numbers or more precisely their Digital Root In this book the author examines the amazing world of numbers particularly those which have intrigued and fascinated ancient and modern mathematicians alike However he does it from a very novel point of view by implementing the digital root operation in which the individual digits of any of these numbers are summed up until a single digit is left over The

author will show that when applying this simple operation to magical numbers and to many other groups of numbers an amazing world of hidden interconnections repetition cycles numerical symmetries and geometrical patterns emerge Especially when the geometrical the circle and the numerical aspects of the digital root world are combined together It is in this circular numerical world where numbers individually and collectively exist in their most basic yet perfect and symmetrical states and where the basic nine numbers are differentiated into three groups of amazing properties which will be shown to underlie the essence of the whole universe from the atom and its forces to the solar system and its geometry This book will take us on a numerical and spiritual journey starting from prime and figurate numbers to Fibonacci sequence and the golden section to alchemy and the Mayan calendar to the atoms and its forces along with the ether and the fourth dimension In addition the author will show how these new revelations of the digital root world are corroborating the numerological and mystical qualities that have been attributed to numbers by philosophers and mystics throughout the ages This book will paint a so holistic and meaningful image of the world that will forever change our perception not only towards numbers but towards the whole universe as well
