Biophysical Foundations of Human Movement Bruce Abernethy, Vaughan Kippers, Stephanie J. Hanrahan, Marcus G. Pandey, Ali McManus, Laurel Mackinnon, 2018-10-30. Biophysical Foundations of Human Movement Third Edition introduces readers to key concepts concerning the anatomical, mechanical, physiological, neural, and psychological bases of human movement. The text provides undergraduate students with a broad foundation for more detailed study of the subdisciplines of human movement and for cross-disciplinary studies. Readers will learn the multi-dimensional changes in movement and movement potential that occur throughout the life span as well as those changes that occur as adaptations to training practice and other lifestyle factors. This third edition includes the latest research and improved presentation to address areas of growth and change in the fields of human movement. The following are important updates to this edition: A new chapter on historical origins of human movement science provides students with an appreciation of the development of the field as well as its future directions. Content regarding exercise physiology has been reorganized to provide more discrete coverage of key concepts in nutrition. A new concluding section focuses on applications in the areas of prevention and management of chronic disease, prevention and management of injury, and performance enhancement in sport and the workplace as well as the benefits of sport and exercise science to work, sport, and everyday living. Ancillary materials support instructors in teaching across disciplines as they assist students in understanding the breadth of content in this comprehensive text. Using a modular approach to teaching sport and exercise science, Biophysical Foundations of Human Movement Third Edition offers students a structured understanding of how the subdisciplines work independently and in tandem. Following a general introduction to the field of human movement studies, readers are introduced to basic concepts: life span changes and adaptations arising in response to training in each of the five major biophysical subdisciplines of human movement. Each subdiscipline is given a brief introduction including the definition and historical development of the subdiscipline, the typical issues and problems it addresses, the levels of analysis it uses, and relevant professional training and organizations. Multi-disciplinary and cross-disciplinary approaches to human movement are also discussed along with contemporary applications. By studying the integration of knowledge from a number of the biophysical subdisciplines, students will be better prepared for advanced study and careers reliant on the integration of knowledge from various disciplines and perspectives. The third edition offers tools for retaining the material, including

learning objectives and summaries in each chapter a glossary and lists of web based resources Throughout the text special In Focus features highlight key organizations individuals and studies from around the world that have contributed to the current understanding of human movement These features help readers appreciate the evolution of the field so that they may better understand its direction Students interested in further study will find specialized texts for each of the subdisciplines listed in the Further Reading and References section of each chapter along with updated lists of websites The third edition of Biophysical Foundations of Human Movement offers a comprehensive introduction for students scientists and practitioners involved in the many professions grounded in or related to human movement kinesiology and sport and exercise science By considering the effect of adaptations in each of the biophysical subdisciplines of human movement Biophysical Foundations of Human Movement also illustrates the important role physical activity plays in the maintenance of health throughout the life span Recreation Areas, Their Design and Equipment National Recreation Association, George Daniel Butler, 1958
