

HUMAN URINARY TRACT AND KIDNEY

Name _____

Label the parts of the human urinary system, including the human kidney, in the diagram below. Give the function/purpose of each part.

- kidneys removes nitrogens, salts, & water from blood
- adrenal glands produce epinephrine & norepinephrine
- ureter drains kidney into the bladder
- urinary bladder Stores urine until it can be released
- urethra drains urinary bladder to
- renal artery Artery leading to kidneys - brings "dirty" blood
- renal vein vein leading away from kidneys - removes "clean" blood
- cortex outer layer of kidney
- medulla inner layer of kidney - contains many nephrons
- renal pelvis drains each nephron - central area, collects urine

Fill in the blanks below with the correct answers.

Kidneys are the "filters" of the excretory system. They control essential balance between body salts and water. They remove from the blood nitrogenous wastes, water, urea, nonvolatile foreign substances, excess salt and excess water. The kidney is enclosed by a connective tissue capsule and is divided into an outer cortex and an inner medulla. The Loop of Henle functions chiefly for water resorption. The liquid waste, urine, collected by the kidneys passes through the ureter to the urinary bladder. Urinary bladder is a strong muscular organ that stores the urine until it can be excreted via the urethra.

Human Hormones Answers Biology If8765:

Hormones Anthony W. Norman, Gerald Litwack, 1987 Provides a comprehensive treatment of human hormones viewed in the light of modern theories of hormone action and in the context of current understanding of cellular architecture and organ physiology *Hormones* Etienne-Emile Baulieu (ed), Paul A. Kelly, 1990-11-30 Endocrinology is a field in which enormous advances have been made in the last decade the rate of discovery of new hormones hormone like molecules receptors and mechanisms of action is continually advancing The development of techniques in immunology and molecular biology has led to the possibility of describing in detail the gene structure of many of the compounds involved in hormonal systems Remarkable homology has been shown between oncogene products and various components of the endocrine network leading to the assertion that deregulation of hormonal function is involved in the generation and or development of cancer We now know that the central nervous system is both a target and a production site of many hormonal products and that hormones neurotransmitters growth factors and immunopeptides all act through similar mechanisms The only second messenger known ten years ago was cAMP today calcium derivatives of membrane phospholipids and protein kinases are also known to be mediators of hormone action The very concept of hormonal systems has been expanded to include not only endocrine secretions but also para and autohormones and their mechanisms of action an understanding of their functions will be central to the immediate future of medicine The discovery of hormonal molecules and endocrine interactions and the subsequent understanding of hormone related pathophysiology has led to the development of new strategies in medical treatment such as fertility control and the management of diabetes Hormones in Human Reproduction George Washington Corner, 2015-12-08 A Scientific Book Club selection this comprehensive account of the nature and function of the hormones in the processes of sex and reproduction Originally published in 1942 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Human Hormones Claude Alvin Villet, 1987 **The Hormones in Human Reproduction** George Washington Corner, 1947 **The Endocrine System** Lynette Rushton, 2009 Discover how the endocrine system works to maintain an internal balance within the human body **Hormones** Joy Hinson, Peter Raven, 2019 This primer introduces students to key elements of the endocrine system including the structure and function of the major types of hormones It explores the role of hormones in disease in development in reproduction and in behaviour Although humans are its main focus it draws on illuminating examples from a range of other species including sex changes and aggression in fish metamorphosis in amphibians induction of ovulation in different species and bonding behaviour in birds The final section of the book looks at

ways in which hormones can be used in medicine and agriculture and can be abused to enhance sporting performance and weight loss This primer will expand the breadth and depth of student understanding of the endocrine system its variety and its huge importance Hormones in Human Blood Harry N. Antoniades,1976 **Hormones** Anthony W. Norman,Gerald Litwack,1997 The newly revised and updated Hormones Second Edition provides a comprehensive treatment of human hormones viewed in light of modern theories of hormone action and in the context of current understanding of subcellular and cellular architecture and classical organ physiology Each chapter presents a physiological description of the hormone system under consideration followed by a listing of the mode of action of the hormone This book includes significant advances in the molecular biology of receptors hormones and studies of hormone action that have transpired over the past five years The text updates the material on enzymes related to steroid metabolism and new hormone systems as well as providing a new chapter on hormones and cancer Key Features Completely updates the material covering new discoveries and significant advances since the First Edition was published in 1987 Contains new information regarding steroid hormones the role of hormones in cancer and a comprehensive introductory chapter Presents an overview of virtually all important hormones Provides detailed physiological cellular and molecular descriptions of classical human endocrine systems Streamlines the presentation of the First Edition making the book easier to use and read **Hormones** ,1978 **Human Endocrinology** Paul R. Gard,1998-03-03 The endocrine system is an efficient means of controlling via hormones large numbers of cells at many different sites in the body and it is the most important factor in the control of the basic processes of the individual such as metabolism growth and reproduction _ Human Endocrinology is a concise lucid explanation of how hormones are secreted by various glands into the blood and dispersed to cells within the body Each hormone group is described in a separate chapter dealing with the factors affecting the hormones secretion and the use of particular hormones in the treatment of disease _ Disorders of the endocrine system such as diabetes and some forms of dwarfism and the use of hormones in medicine such as oral contraceptives are covered The illegal use of hormonal drugs for example anabolic steroids in sport is also discussed _ The author s accessible style and extensive use of figures and tables make this a valuable text for all students studying the subject as part of many bioscience courses including medicine nursing physiology pharmacy pharmacology and biomedical science **Human Hormones** Raymond Greene,1970 *Hormones, Health and Behaviour* Catherine Panter-Brick,Carol M. Worthman,1999 Hormones Health and Behavior looks at the relationship of human biology and human society at the intersection of behavior hormones and health **The Endocrine and Reproductive Systems** ,2014 A graphic nonfiction volume that introduces the endocrine and reproductive systems of the human body

Handbook of Hormones Yoshio Takei,Hironori Ando,Kazuyoshi Tsutsui,2015-08-26 Handbook of Hormones Comparative Endocrinology for Basic and Clinical Research collates fundamental information about the structure and function of hormones from basic biology to clinical use The handbook offers a rapid way to obtain specific facts about the

chemical and molecular characteristics of hormones their receptors and signalling pathways and the biological activities they regulate The evolution of hormones and gene families is also covered both in the text and in online ancillaries Users will find simple and visual ways to learn key molecular information Chapters and online ancillary resources integrate additional sections providing a comparative molecular functional and evolutionary consideration Provides the only single resource available with concise yet informative descriptions of hormones in vertebrates invertebrates and plants Presents hormones in groups according to their origin so that readers can easily understand their inter relation Includes comparative information on the structures and functions of hormones enabling readers to understand both general and specific actions in and across species Ancillary website hosts additional information including sequence data comparative data figures and tables
