pharmaceutical and biotech industries are routinely called upon to handle operational issues outside of their fields of expertise. Traditionally the competencies required to fulfill those tasks were achieved piecemeal through years of self-teaching and on the job experience until now Practical Pharmaceutical Engineering provides readers with the technical information and tools needed to deal with most common engineering issues that can arise in the course of day to day operations of pharmaceutical biotech research and manufacturing. Engineers working in pharma biotech wear many hats. They are involved in the conception design construction and operation of research facilities and manufacturing plants as well as the scale up manufacturing packaging and labeling processes. They have to implement FDA regulations validation assurance quality control and Good Manufacturing Practices GMP compliance measures and to maintain a high level of personal and environmental safety. This book provides readers from a range of engineering specialties with a detailed blueprint and the technical knowledge needed to tackle those critical responsibilities with confidence. At minimum after reading this book readers will have the knowledge needed to constructively participate in contractor user briefings. Provides pharmaceutical industry professionals with an overview of how all the parts fit together and a level of expertise that can take years of on the job experience to acquire. Addresses topics not covered in university courses but which are crucial to working effectively in the pharma biotech industry. Fills a gap in the literature providing important information on pharmaceutical operation issues required for meeting regulatory guidelines plant support design and project engineering. Covers the basics of HVAC systems water systems electric systems reliability maintainability and quality assurance relevant to pharmaceutical engineering.
