An Introduction to multiscale modeling with applications Pietro Asinari, Eliodoro Chiavazzo, 2019-01-01 This book collects the slides prepared for the course of Advanced Engineering Thermodynamics Master of Science in Mechanical Engineering and those for the course of Multiscale Modelling and Simulation of Molecular and Mesoscopic Dynamics PhD Program in Energetics taught in English at Turin Polytechnic Here we provide a broad overview on the different topics taught in our classes Even though not all topics are presented in the same class students should be able to more easily reconstruct the connections among different phenomena and scales build their own mind map and eventually find their own way of deepening the subjects they are more interested in Several engineering applications have been included This helps in stressing that very different phenomena are described by transport theory and obey the same underlying fundamental laws of engineering thermodynamics Detailed tutorials are reported based on open source codes for the laboratories Gromacs Palabos OpenFoam and Cantera

e-Design Kuang-Hua Chang, 2016-02-23 e Design Computer Aided Engineering Design Revised First Edition is the first book to integrate a discussion of computer design tools throughout the design process Through the use of this book the reader will understand basic design principles and all digital design paradigms the CAD CAE CAM tools available for various design related tasks how to put an integrated system together to conduct All Digital Design ADD industrial practices in employing ADD and tools for product development Comprehensive coverage of essential elements for understanding and practicing the e Design paradigm in support of product design including design method and process and computer based tools and technology Part I Product Design Modeling discusses virtual mockup of the product created in the CAD environment including not only solid modeling and assembly theories but also the critical design parameterization that converts the product solid model into parametric representation enabling the search for better design alternatives Part II Product Performance Evaluation focuses on applying CAE technologies and software tools to support evaluation of product performance including structural analysis fatigue and fracture rigid body kinematics and dynamics and failure probability prediction and reliability analysis Part III Product Manufacturing and Cost Estimating introduces CAM technology to support manufacturing simulations and process planning sheet forming simulation RP technology and computer numerical control CNC machining for fast product prototyping as well as manufacturing cost estimate that can be incorporated into product cost calculations Part IV Design Theory and Methods discusses modern decision making theory and the application of the theory to engineering design introduces the mainstream design optimization methods for both single and multi objectives problems through both batch and interactive design modes and provides a brief discussion on sensitivity analysis which is essential for designs using gradient based approaches Tutorial lessons and case studies are offered for readers to gain hands on experiences in practicing e Design paradigm using two suites of engineering software Pro ENGINEER based including Pro MECHANICA Structure Pro ENGINEER Mechanism Design and Pro MFG and

Structural Engineering, Mechanics and Computation A. Zingoni, 2001-03-16 Following on from the International Conference on Structural Engineering Mechanics and Computation held in Cape Town in April 2001 this book contains the Proceedings in two volumes There are over 170 papers written by Authors from around 40 countries worldwide The contributions include 6 Keynote Papers and 12 Special Invited Papers In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents the papers cover a wide range of topics under a variety of themes There is a healthy balance between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design safety and construction As the contributions in these Proceedings show new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting

structural materials such as glass have recently come onto the scene Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human life and property against the effects of fire earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings bridges and other engineering structures **13th International**
