Numerical Correlation between Impact Factor and Web Ranking of Electronic Scientific Journals Using Regression Analysis Giorgos Kouropoulos, Γιώργος Κουρόπουλος, 2017-12-15 The present study attempts to examine the numerical correlation between web ranking of electronic scientific journals and impact factor of these journals using the method of regression analysis Regression analysis allows the option of investigating and predicting the numerical relationship between website ranking of scientific journals on the World Wide Web and the value of impact factor of the journals A sample of 57 publishers with 6 272 scientific journals and 50 standalone scientific journals was analyzed during research procedure In this study two different indicators about websites classification on World Wide Web were examined separately for 57 publishers and 50 standalone journals Alexa rank and Statscrop rank The electronic databases through the internet constitute the main information resources of this study about the impact factors The general conclusion that arises is that the impact factor of electronic scientific journals illustrates a very strong positive correlation with classification of websites on the World Wide Web Furthermore it is concluded that the change of web ranking as a function of impact factor is governed by a Gaussian function or rational function with lower Pearson coefficient and presents non linearly correlation Even if there is very strong correlation between impact factor and web rank for electronic journals the prediction of impact factor from web rank is not possible and presents many divergences *Journals of the Century* Tony Stankus, 2019-12-06 This book first published in 2002 gathers some of America s top subject expert librarians to determine the most influential journals in their respective fields 32 contributing authors reviewed journals from over twenty countries that have successfully shaped the evolution of their individual specialties worldwide Their choices reflect the history of each discipline or profession taking into account rivalries between universities professional societies for profit and not for profit publishers and even nation states and international ideologies in each journal s quest for reputational dominance Each journal was judged using criteria such as longevity of publication foresight in carving out its niche ability to attract none are in the employ of any publisher but each is fully credentialed and well published and many are award winners The authors guide college and professional school librarians on limited budgets via an exposition of their analytical and critical winnowing process in determining the classic resources for their faculty students and working professional clientele

Multidimensional Journal Evaluation Stefanie Haustein, 2012-04-26 Scientific communication depends primarily on publishing in journals The most important indicator to determine the influence of a journal is the Impact Factor Since this factor only measures the average number of citations per article in a certain time window it can be argued that it does not reflect the actual value of a periodical This book defines five dimensions which build a framework for a multidimensional method of journal evaluation The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011 Impact of Global University Ranking Systems on Developing Countries Onyancha, Omwoyo Bosire, Tella, Adeyinka, 2023-06-01 The

emotive discourses on the subject of university rankings are directly linked to the effect of such rankings on the performance of universities throughout the world. It has been observed that the top ranked universities attract major financial commitments from the industry, the best students, quality researchers and a wide range of other quality endowments such as equipment, libraries and laboratories. It is not surprising that the ranking of universities has gained popularity and become a significant factor shaping not only the reputation of universities but also the performance of said institutions around the world, including the developing countries. *Impact of Global University Ranking Systems on Developing Countries* presents a collection of perspectives from scholars and other stakeholders on the impact of the global ranking systems on developing countries. The book is an additional resource for discussion and discourse as far as the global university ranking systems are concerned and opens new frontiers for further research. Covering key topics such as assessment, ethics and academic freedom, this premier reference source is ideal for administrators, policymakers, researchers, scholars, academicians, practitioners, instructors and students.

World University Rankings and the Future of Higher Education Downing, Kevin, Ganotice, Jr., Fraide A., 2016-10-06. Delivering quality education to students while remaining competitive at an international level is only one of the many challenges universities face today. To attain their goals, universities must adopt new strategies to achieve academic excellence. *World University Rankings and the Future of Higher Education* is a pivotal reference source for the latest scholarly research on the implementation of a ranking system for higher education institutions, providing a thorough overview of the impacts of these rankings on educational quality. Exploring the benefits and challenges of this system in a global context, this book is ideally designed for academicians, researchers, students, administrators and policy makers interested in the effects of university rankings in the education sector and beyond.

This contributed volume contains fourteen papers based on selected presentations from the European Conference on Game Theory SING11 GTM 2015 held at Saint Petersburg State University in July 2015 and the Networking Games and Management workshop held at the Karelian Research Centre of the Russian Academy of Sciences in Petrozavodsk, Russia, also in July 2015. These papers cover a wide range of topics in game theory, including recent advances in areas with high potential for future work as well as new developments on classical results. Some of these include: A new

approach to journal ranking using methods from social choice theory A differential game of a duopoly in which two firms are competing for market share in an industry with network externalities The impact of information propagation in the model of tax audits A voting model in which the results of previous votes can affect the process of coalition formation in a decision making body The Selten Szidarovsky technique for the analysis of Nash equilibria of games with an aggregative structure Generalized nucleoli and generalized bargaining sets for games with restricted cooperation Bayesian networks and games of deterrence and A new look at the study of solutions for games in partition function form The maturity and vitality of modern day game theory are reflected in the new ideas novel applications and contributions of young researchers represented in this collection It will be of interest to anyone doing theoretical research in game theory or working on one its numerous applications

The Power of Rankings in Economics and Research Organizations Stephan Pühringer, Jens Maesse, Thierry Rossier, 2025-06-06 Discourses around research excellence and quality are predominant within the economic sciences with various forms of ranking playing a central role They make excellence in research and teaching visible but they also create hierarchical orders between researchers institutions publication outlets and countries The authors of this volume analyse the role of rankings in shaping and transforming economics from different theoretical methodological and disciplinary perspectives The various contributions explore the specific situation in different countries as well as global developments within economics and beyond In addition the book contributes to an overall debate about the role and function of rankings in academia The analysis focuses on four aspects rankings and social hierarchies rankings and paradigmatic hegemonies rankings and regulations policies as well as rankings and critique alternatives The book addresses scholars in economic sociology economics higher education and science studies The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

Beyond Power Transitions David C. Kang, Xinru Ma, 2024-10-08 Questions about the likelihood of conflict between the United States and China have dominated international policy discussion for years But the leading theory of power transitions between a declining hegemon and a rising rival is based exclusively on European examples such as the Peloponnesian War as chronicled by Thucydides as well as the rise of Germany under Bismarck and the Anglo German rivalry of the nineteenth and early twentieth centuries What lessons does East Asian history offer for both the power transitions debate and the future of U S China relations Examining the rise and fall of East Asian powers over 1 500 years Beyond Power Transitions offers a new perspective on the forces that shape war and peace Xinru Ma and David C Kang argue that focusing on the East Asian experience underscores domestic risks and constraints on great powers not relative rise and decline in international competition They find that almost every regime transition before the twentieth century was instigated by internal challenges and even the exceptions deviated markedly from the predictions of power transition theory Instead East Asia was stable for a remarkably long time despite massive power differences because of common understandings about

countries relative status Provocative and incisive this book challenges prevailing assumptions about the universality of power transition theory and shows why East Asian history has profound implications for international affairs today
