Freshwater Environmental Issues Global Perspectives:

Freshwater James Fargo Balliett, 2014-12-18 Freshwater is our planet's most precious resource and also the least conserved. Freshwater makes up only 3 percent of the total water on the planet and yet the majority 1.9 percent is held in a frozen state in glaciers, icebergs, and polar ice fields. This leaves approximately one half of 1 percent of the total volume of water on the planet as freshwater available in liquid form. This book traces the complex history of the steady growth of humankind's water consumption which today reaches some 9.7 quadrillion gallons per year. Along with a larger population has come the need for more drinking water, larger farms requiring extensive irrigation, and more freshwater to support business and industry. At the same time, such developments have led to increased water pollution. Three detailed case studies are included. The first looks at massive water systems in locations such as New York City and the efforts required to protect and transport such resources. The second shows how growth has affected freshwater quality in the ecologically unique and geographically isolated Lake Baikal region of eastern Russia. The third examines the success story of the privatized freshwater system in Chile and considers how that country's water sources are threatened by climate change. **Freshwater**

James Fargo Balliett, 2010 Freshwater makes up 3 percent of the total water on the planet with just over 1 percent available in liquid form. Freshwater tracks the complex history of the steady growth of humankind's water consumption. The world's increasing population has demanded more water for drinking and irrigation and to support business and industry while also increasing pollution of the same water resources. The case studies in *Freshwater* look at the efforts to protect and transport water within systems such as New York City, examine how growth has affected freshwater quality in the Lake Baikal region of eastern Russia, and study the success story of the privatized freshwater system in Santiago, Chile, among other relevant issues.

Governmental Response to Environmental Challenges in Global Perspective Joseph G. Jabbara, O. P. Dwivedi, 1998 In our drive to improve human standards of living we have paradoxically paid scant attention to the need for clean air and water the impact of acid rain on agriculture lakes and rivers the effect of pollutants on the ozone layer the safe disposal of hazardous wastes and the relationship between population growth and the environment It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment priority is always given to the former Short term plans dictated by canons of political survival and expediency always seem to take precedence over long term strategies with politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric This book is an effort to better understand the problems faced by our global ecosystems It is also the result of the authors' deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations *Large-Scale Ecology: Model Systems to Global Perspectives*, 2016-10-05 Advances in Ecological Research is one of the most successful series in the highly competitive field of ecology This thematic volume focuses on large scale ecology publishing important reviews that contribute to our understanding of the field Presents the most updated information on the field of large scale ecology publishing topical and important reviews Provides all information that relates to a thorough understanding of the field Includes data on physiology populations and communities of plants and animals **Global Environment Outlook 3** United Nations Environment Programme, 2002 Integrating environment and development 1972 2002 State of the environment and

Forests James Fargo Balliett, 2014-12-18 Forests are considered the lungs of the planet as they consume and store carbon dioxide and produce oxygen These biomes defined as ecological communities dominated by long lived woody vegetation historically have provided an economic foundation for growing nations supplying wood for buildings firewood for fuel and land for expanding cities and farms For centuries industrial nations in Europe and the United States have relied on large tracts of forestland for economic prosperity The research presented in this book reveals that population pressures are causing considerable environmental distress in even the most remote forest areas Three detailed case studies are presented The first provides an assessment of illegal logging deep in South America's Amazon rain forest a region closely tied to food and product demands thousands of miles away The second examines the effect of increased hunting in Central Africa's Congo forest which threatens wildlife especially mammal species with slower reproductive cycles Finally the third describes encroachment on old growth tropical forests on the Southern Pacific island of Borneo which today is better managed thanks to the collective planning and conservation efforts of the governments of Brunei Indonesia and Malaysia

The Global Casino: An Introduction to Environmental Issues, Fourth Edition Nick Middleton, 2013-11-26 The Global Casino is a compelling introduction to environmental issues which links the physical environment to its political social and economic contexts Case studies from around the globe are used to illustrate key environmental issues from global warming and deforestation to natural hazards and soil erosion The book highlights the underlying causes behind environmental problems including human actions and emphasises the potential for solutions In line with contemporary international trends emphasis is placed on the critical concept of sustainable development This new edition has been thoroughly revised and updated with the introduction of new illustrative material and up to the minute case studies on topics such as endangered deep sea species the global uptake of unleaded petrol geothermal energy in Iceland genocide in Rwanda and the Indian Ocean tsunami of 2004 Particularly useful features for students include points for discussion at the end of each chapter as well as a comprehensive glossary The lists of key readings and websites again linked specifically to the content of each chapter have been fully updated and expanded The Global Casino is the essential course companion for students of the environment geography earth sciences and development studies

Global Plastics Outlook Policy Scenarios to 2060 OECD, 2022-06-21 The global community is far from achieving its objective of ending plastic pollution unless more stringent and coordinated policies are implemented A key question is What are the plausible scenarios for the evolution of plastics in the absence of additional measures and as well with scaled up policy action

Environmental Indicators for North America United Nations Environment Programme, 2006 Although the environment of North America is not dissected

by political borders Canada and the United States often measure environmental conditions and report on them using different indicators This report examines the environmental indicators used by both nations and based on analysis of current research into common methodologies used in national regional and global environmental reporting it goes on to draw lessons for the development of bilateral indicators to cover the North American region [Routledge Handbook of Environment and Society in Asia](#) Paul G. Harris, Graeme Lang, 2014-09-19 Nowhere is the connection between society and the environment more evident and potentially more harmful for the future of the world than in Asia In recent decades rapid development of Asian countries with very large populations has led to an unprecedented increase in environmental problems such as air and water pollution solid and hazardous wastes deforestation depletion of natural resources and extinction of native species This handbook provides a comprehensive survey of the cultural social and policy contexts of environmental change across East Asia The team of international experts critically examine a wide range of environmental problems related to energy climate change air land water fisheries forests and wildlife The editors conclude that with nearly half of the human population of the planet and several rapidly growing economies most notably China Asian societies will determine much of the future of human impacts on the regional and global environments As climate change related threats to society increase the book strongly argues for increased environmental consciousness and action in Asian societies This handbook is a very valuable companion for students scholars policy makers and researchers working on environmental issues in Asia [Global Biodiversity in a Changing Environment](#) F. Stuart Chapin, Osvaldo E. Sala, Elisabeth Huber-Sannwald, 2013-12-01 The scientific community has voiced two general concerns about the future of the earth Climatologists and oceanographers have focused on the changes in our physical environment changes in the climate the oceans and the chemistry of the air we breathe Environmental biologists on the other hand have addressed issues of conservation and the extinction of species There is increasing evidence that these two broad concerns are intertwined and mutually dependent Past changes in biodiversity have both responded to and caused changes in Earth's environment In its discussions of ten key terrestrial biomes and freshwater ecosystems this volume uses our broad understanding of global environmental change to present the first comprehensive scenarios of biodiversity for the twenty first century Combining physical earth science with conservation biology Future Scenarios of Global Biodiversity provides a starting point for regional assessments on all scales The book will be of interest to those concerned with guiding research on the changing environment of the earth and with planning future policy especially in accordance with the Global Biodiversity Convention
