Ecology of Atlantic Salmon and Brown Trout Bror Jonsson,Nina Jonsson,2011-05-03 Destruction of habitat is the major cause for loss of biodiversity including variation in life history and habitat ecology Each species and population adapts

to its environment adaptations visible in morphology ecology behaviour physiology and genetics Here the authors present the population ecology of Atlantic salmon and brown trout and how it is influenced by the environment in terms of growth migration spawning and recruitment Salmonids appeared as freshwater fish some 50 million years ago Atlantic salmon and brown trout evolved in the Atlantic basin Atlantic salmon in North America and Europe brown trout in Europe Northern Africa and Western Asia The species live in small streams as well as large rivers lakes estuaries coastal seas and oceans with brown trout better adapted to small streams and less well adapted to feeding in the ocean than Atlantic salmon Smolt and adult sizes and longevity are constrained by habitat conditions of populations spawning in small streams Feeding wintering and spawning opportunities influence migratory versus resident lifestyles while the growth rate influences egg size and number age at maturity reproductive success and longevity Further early experiences influence later performance For instance juvenile behaviour influences adult homing competition for spawning habitat partner finding and predator avoidance The abundance of wild Atlantic salmon populations has declined in recent years climate change and escaped farmed salmon are major threats The climate influences through changes in temperature and flow while escaped farmed salmon do so through ecological competition interbreeding and the spreading of contagious diseases The authors pinpoint essential problems and offer suggestions as to how they can be reduced In this context population enhancement habitat restoration and management are also discussed The text closes with a presentation of what the authors view as major scientific challenges in ecological research on these species

Energy Research Abstracts ,1988 **The Encyclopedia of Public Choice** Charles Rowley,Friedrich Schneider,2008-01-25 The Encyclopedia provides a detailed and comprehensive account of the subject known as public choice However the title would not convey sufficiently the breadth of the Encyclopedia's contents which can be summarized better as the fruitful interchange of economics political science and moral philosophy on the basis of an image of man as a purposive and responsible actor who pursues his own objectives as efficiently as possible This fruitful interchange between the fields outlined above existed during the late eighteenth century during the brief period of the Scottish Enlightenment when such great scholars as David Hume Adam Ferguson and Adam Smith contributed to all these fields and more However as intellectual specialization gradually replaced broad based scholarship from the nineteenth century onwards it became increasingly rare to find a scholar making major contributions to more than one Once Alfred Marshall defined economics in neoclassical terms as a narrow positive discipline the link between economics political science and moral philosophy was all but severed and economists redefined their role into that of the humble dentist providing technical economic information as inputs to improve the performance of impartial benevolent and omniscient governments in their attempts to promote the public interest This indeed was the dominant view within an economics profession that had become besotted by the economics of John Maynard Keynes and Paul Samuelson immediately following the end of the Second World War
