Decision Making under Uncertainty Kerstin Preuschoff, Peter N. C. Mohr, Ming Hsu, 2015-06-16 Most decisions in life are based on incomplete information and have uncertain consequences To successfully cope with real life situations the nervous system has to estimate represent and eventually resolve uncertainty at various levels A common tradeoff in such decisions involves those between the magnitude of the expected rewards and the uncertainty of obtaining the rewards For instance a decision maker may choose to forgo the high expected rewards of investing in the stock market and settle instead for the lower expected reward and much less uncertainty of a savings account Little is known about how different forms of uncertainty such as risk or ambiguity are processed and learned about and how they are integrated with expected rewards and individual preferences throughout the decision making process With this Research Topic we aim to provide a deeper and more detailed understanding of the processes behind decision making under uncertainty TMS 2013 142nd Annual Meeting and Exhibition

The Minerals, Metals & Materials Society (TMS), 2013-02-22 Presenting papers from the 2013 annual meeting of The Minerals Metals Materials Society TMS this volume covers developments in all aspects of high temperature electrochemistry from the fundamental to the empirical and from the theoretical to the applied **The Theory of Response-Adaptive Randomization in Clinical Trials**

Feifang Hu, William F. Rosenberger, 2006-09-29 Presents a firm mathematical basis for the use of response adaptive randomization procedures in practice The Theory of Response Adaptive Randomization in Clinical Trials is the result of the authors ten year collaboration as well as their collaborations with other researchers in investigating the important questions regarding response adaptive randomization in a rigorous mathematical framework Response adaptive allocation has a long history in biostatistics literature however largely due to the disastrous ECMO trial in the early 1980s there is a general reluctance to use these procedures This timely book represents a mathematically rigorous subdiscipline of experimental design involving randomization and answers fundamental questions including How does response adaptive randomization affect power Can standard inferential tests be applied following response adaptive randomization What is the effect of delayed response Which procedure is most appropriate and how can most appropriate be quantified How can heterogeneity of the patient population be incorporated Can response adaptive randomization be performed with more than two treatments or with continuous responses The answers to these questions communicate a thorough understanding of the asymptotic properties of each procedure discussed including asymptotic normality consistency and asymptotic variance of the induced allocation Topical coverage includes The relationship between power and response adaptive randomization The general result for determining asymptotically best procedures Procedures based on urn models Procedures based on sequential estimation Implications for the practice of clinical trials Useful for graduate students in mathematics statistics and biostatistics as well as researchers and industrial and academic biostatisticians this book offers a rigorous treatment of the subject in order to find the optimal procedure to use in practice

Estimands, Estimators and Sensitivity Analysis in Clinical Trials Craig Mallinckrodt, Geert Molenberghs, Ilya Lipkovich, Bohdana Ratitch, 2019-12-23 The concepts of estimands analyses estimators and sensitivity are interrelated Therefore great need exists for an integrated approach to these topics This book acts as a practical guide to developing and implementing statistical analysis plans by explaining fundamental concepts using accessible language providing technical details real world examples and SAS and R code to implement analyses The updated ICH guideline raises new analytic and cross functional challenges for statisticians Gaps between different communities have come to surface such as between causal inference and clinical trialists as well as among clinicians statisticians and regulators when it comes to communicating decision making objectives assumptions and interpretations of evidence This book lays out a path toward bridging some of these gaps It offers A common language and unifying framework along with the technical details and practical guidance to help statisticians meet the challenges A thorough treatment of intercurrent events ICEs i e postrandomization events that confound interpretation of outcomes and five strategies for ICEs in ICH E9 R1 Details on how estimands integrated into a principled study development process lay a foundation for coherent specification of trial design conduct and analysis needed to overcome the issues caused by ICEs A perspective on the role of the intention to treat principle Examples and case studies from various areas Example code in SAS and R A connection with causal inference Implications and methods for analysis of longitudinal trials with missing data Together the authors have offered the readers their ample expertise in clinical trial design and analysis from an industrial and academic perspective

Visual Dysfunction in Schizophrenia: A View into the Mechanisms of Madness? Randolph Blake, Steven Silverstein, Brian P. Keane, Michael Green, Szabolcs Kéri, 2015-05-11 Research on visual perception in schizophrenia has a long history However it is only recently that it has been included in mainstream efforts to understand the cognitive neuroscience of the disorder and to assist with biomarker and treatment development e g the NIMH CNTRICS and RDoC initiatives Advances in our understanding of visual disturbances in schizophrenia can tell us about both specific computational and neurobiological abnormalities and about the widespread computational and neurobiological abnormalities in the illness of which visual disturbances constitute well studied replicable low level examples Importantly far from being a passive sensory registration process visual perception is active inferential and hypothesis generating and therefore can provide excellent examples of breakdowns in general brain functions in schizophrenia Despite progress made in understanding visual processing disturbances in schizophrenia many challenges exist and many unexplored areas are in need of examination For example the directional relationships between perceptual and cognitive disturbances e g in attention memory executive function predictive coding remain unclear in many cases as do links with symptoms including visual hallucinations The effect of specific visual disturbances on multisensory integration in schizophrenia has also not been explored In addition few studies of vision in schizophrenia have used naturalistic stimuli including real world objects and almost no studies have examined processing during interaction with objects or visual

exploration which can provide important data on functioning of the perception for action pathway Relatedly studies of visual processing in schizophrenia have also not been conducted within contexts that include emotional stimulation and the presence of reinforcers characteristics of many real world situations and the consequences of this are likely to be an incomplete view of how and when perception is abnormal in the condition An additional important area involves treatment of visual disturbances in schizophrenia Two major questions regarding this are 1 can visual processing be improved in cases where it is impaired and by what types of interventions affecting which cognitive and neurobiological mechanisms and 2 what are the clinical and functional benefits of improving specific visual functions in people with schizophrenia Other important and understudied questions concern 1 the extent to which indices of visual functioning can serve as biomarkers such as predictors of relapse treatment response and or recovery 2 the potential role of visual functioning in diagnosing and predicting illness 3 the extent to which some visual perception disturbances are diagnostically specific to schizophrenia and 4 the extent to which visual disturbances are truly manifestations of disease as opposed to aspects of normal variation that in combination with disease serves to modify the clinical presentation This Frontiers Research Topic explores some of these and other issues facing this exciting interface between vision science and schizophrenia research We include papers that span the entire range of different Frontiers paper types including those that are data driven using psychophysics electroencephalography neuroimaging computational and animal models and other methods reviews hypotheses theories opinion methods areas of impact and historical perspectives

Douglas Crawford, 2016-12-07 One remarkable ability of the human brain is to process large amounts of information about our surroundings to allow us to interact effectively with them In everyday life the most common way to interact with objects is by reaching grasping lifting and manipulating them Although these may sound like simple tasks the perceptual properties of the target object such as its location size shape and orientation all need to be processed in order to set the movement parameters that allow an accurate reach to grasp to lift movement Several brain areas work in concert to process this outstanding amount of visual information and drive the execution of a motor plan in just a few hundred milliseconds How are these processes orchestrated In developing this type of comprehensive knowledge about the interactions between objects perception and goal directed actions we have a window into the mechanisms underlying the functioning of the visuo motor system With this research topic we aim to further understand the neural mechanisms that mediate our interactions with the world Therefore we particularly encourage submission of papers that attempt to relate such findings to real world situations by investigating behavioural and neural correlates of information processing related to eye hand coordination and visually guided actions including reaching grasping and lifting movements This topic welcomes submissions of original research using any relevant techniques and methods from behavioural kinematics kinetics to neuroimaging and transcranial magnetic stimulation TMS as well as neuropsychological studies **Analysis of Longitudinal Data** Peter Diggle, Patrick Heagerty, Kung-Yee Liang, Scott Zeger, 2013-03-14 This second edition has been completely revised and expanded to become the most up to date and thorough professional reference text in this fast moving area of biostatistics It contains an additional two chapters on fully parametric models for discrete repeated measures data and statistical models for time dependent predictors **Handbook of Neurobehavioral Genetics and Phenotyping** Valter Tucci, 2016-12-27 The Handbook of Behavioral Genetics and Phenotyping represents an

integrative approach to neurobehavioural genetics worldwide experts in their field will review all chapters Advanced overviews of neurobehavioural characteristics will add immense value to the investigation of animal mutants and provide unique information about the genetics and behavioural understanding of animal models under both normal and pathological conditions Cross species comparisons of neurobehavioural phenotypes will pave the way for an evolutionary understanding of behaviour Moreover while biological sciences are progressing towards a holistic approach to investigate the complexity of organisms i e systems biology approach an integrated analysis of behavioural phenotyping is still lacking The Handbook of Behavioral Genetics and Phenotyping strengthens the cross talk within disciplines that investigate the fundamental basis of behaviour and genetics This will be the first volume in which traditionally distant fields including genomics behaviour electrophysiology neuroeconomics and computational neuroscience among others are evaluated together and simultaneously accounted for during discussions of future perspectives
