ANSWER: (A)

15. The horizontal translation needed to get from Lori's house to Alex's house is the difference between the  $x$ -coordinate of Lori's house, 6, and the  $x$ -coordinate of Alex's house,  $-2$ , or  $6 - (-2) = 6 + 2 = 8$ .

The vertical translation needed to get from Lori's house to Alex's house is the difference between the  $y$ -coordinate of Lori's house, 3, and the  $y$ -coordinate of Alex's house,  $-4$ , or  $3 - (-4) = 3 + 4 = 7$ .

From Lori's house, Alex's house is left and down.

Therefore the translation needed to get from Lori's house to Alex's house is 8 units left and 7 units down.

ANSWER: (D)

16. Reading from the graph, Riley-Ann scored 8 points in Game 1, 7 points in Game 2, 20 points in Game 3, 7 points in Game 4, and 18 points in Game 5.  
Therefore the mean number of points that she scored per game is  $\frac{8+7+20+7+18}{5} = \frac{60}{5} = 12$ .  
Since the ordered list (smallest to largest) of the number of points scored per game is 7, 7, 8, 18, 20, then the median is 8, the number in the middle of this ordered list.  
The difference between the mean and the median of the number of points that Riley-Ann scored is  $12 - 8 = 4$ .

Rice, 2014-05-27 **Mathematical Software** deals with software designed for mathematical applications such as Fortran, CADRE, SQUARS and DESUB. The distribution and sources of mathematical software are discussed along with number representation and significance monitoring. User modifiable software and non standard arithmetic programs are also considered. Comprised of nine chapters, this volume begins with a historical background in the form of a chronological list of events that trace the development of computing in general and mathematical software in particular. The next chapter examines where and how mathematical software is being created and how it is being disseminated to eventual consumers. A number of important shortcomings are identified. The future of mathematical software and the challenges facing mathematical software are then discussed. Subsequent chapters focus on the point of view of people outside the professional community of mathematical software: the monitoring of significance in computation and its relation to number representation libraries of mathematical software and the automation of numerical analysis. Eleven algorithms for numerical quadrature are also compared. This book should be of considerable interest to students and specialists in the fields of mathematics and computer science. **A**

**Handbook for Data Analysis in the Behavioral Sciences** Gideon Keren, Charles Lewis, 2014-01-14 Statistical methodology is often conceived by social scientists in a technical manner; they use it for support rather than for illumination. This two volume set attempts to provide some partial remedy to the problems that have led to this state of affairs. Both traditional issues such as analysis of variance and the general linear model as well as more novel methods like exploratory data analysis are included. The editors aim to provide an updated survey on different aspects of empirical research and data analysis, facilitate the understanding of the internal logic underlying different methods and provide novel and broader perspectives beyond what is usually covered in traditional curricula.
