Practices Keengwe, Jared, 2020-12-11 While many school districts and institutions of higher education still cling to the traditional agrarian school year with a factory model delivery of education and Carnegie units based on seat time when most people are no longer farmers factory workers or reliant on learning in a classroom there are bursts of promising practices that buck the norm by questioning the educational value of these traditions Though researchers have investigated the potential of students learning in their own homes via personalized instruction delivered by computers rather than attending traditional institutions the status quo in education has remained stubbornly resistant to change Mixed reality simulations year round schooling grouping students by competencies instead of age and game based teaching are just a few of the educational innovations that seek to maximize learning by recognizing that innovation is essential for successfully teaching students in the modern era The Handbook of Research on Innovations in Non Traditional Educational Practices is a comprehensive reference source that examines various educational innovations how they have developed workarounds to navigate traditional systems and their potential to radically transform teaching and learning With each chapter highlighting a different educational innovation such as experiential learning game based learning online learning and inquiry based learning and their applications in all levels of education this book explores the issues and challenges these educational innovations face as well as their impact It is intended for academicians professionals administrators and researchers in education and specifically benefits academic deans vice presidents of academic affairs graduate students faculty technology leaders directors of teaching and learning centers curriculum and instructional designers policymakers principals and superintendents and teachers interested in educational change **Inequality for All** William Schmidt, Curtis

McKnight, 2015-04-17 Inequality for All makes an important contribution to current debates about economic inequalities and the growing achievement gap particularly in mathematics and science education The authors argue that the greatest source of variation in opportunity to learn is not between local communities or even schools but between classrooms They zero in on one of the core elements of schooling coverage of subject matter content and examine how such opportunities are distributed across the millions of school children in the United States Drawing on data from the third TIMSS international study of curriculum and achievement as well as a six district study of over 500 schools across the United States they point to Common Core State Standards as being a key step in creating a more level playing field for all students William H Schmidt is University Distinguished Professor at Michigan State University and co director of the Education Policy Center Curtis C McKnight is emeritus professor of mathematics at the University of Oklahoma
