Foundations of Grothendieck Duality for Diagrams of Schemes Joseph Lipman,Mitsuyasu Hashimoto,2009-02-05 The first part written by Joseph Lipman accessible to mid level graduate students is a full exposition of the abstract foundations of Grothendieck duality theory for schemes twisted inverse image tor independent base change in part without noetherian hypotheses and with some refinements for maps of finite tor dimension The ground is prepared by a lengthy treatment of the rich formalism of relations among the derived functors for unbounded complexes over ringed spaces of the sheaf functors tensor hom direct and inverse image Included are enhancements for quasi compact quasi separated schemes of classical results such as the projection and K neth isomorphisms In the second part written independently by Mitsuyasu Hashimoto the theory is extended to the context of diagrams of schemes This includes as a special case an equivariant theory for schemes with group actions In particular after various basic operations on sheaves such as derived direct images and inverse images are set up Grothendieck duality and flat base change for diagrams of schemes are proved Also dualizing complexes are studied in this context As an application to group actions we generalize Watanabe s theorem on the Gorenstein property of invariant subrings
