

The Principles of Hip Joint Preservation

- Three primary anatomic factors must be considered for preservation of the hip joint:
 - Femoroacetabular impingement (FAI)
 - Acetabular dysplasia
 - Femoral rotational abnormalities (excessive anteversion)
- Each factor affects the integrity of the labrum and femoroacetabular cartilage
- All factors should be assessed in patients presenting with pre-arthritic hip pain

Abnormalities and surgical treatment (right hip) may include:

FAI

Femoroplasty

Acetabular dysplasia

Periacetabular osteotomy

Femoral rotational abnormalities

De-rotational femoral osteotomy

For a successful outcome, careful preoperative planning is necessary to address all factors
