WHAT IS A PROGRAMMER?

an Explanation for Manufacturers (as recommended by the Energy Savings Trust)

Programmers allow you to set ON and OFF times periods. Some heaters control the central heating and domestic hot water or set OFF at the same time, while others allow the domestic hot water and heating to work or set up at different times. On the ON and OFF time periods to suit your own needs. In some programmes you may also set whether you want the heating and/or water to be continuously on until the chosen ON and OFF periods, or to be continuously OFF. The time of the programmer must be correct. Some types have a time indicated in spring and a second of the changes between Summer/ Winter, Fall and Winter. Summer Time, you may be able to temporarily adjust the heating programme, for example, Summer, Autumn or Winter Time, as indicated in the manufacturer's instructions. The heating will not work if the time programme has expired the heating off time. If you have a hot water cylinder, the water heating will be set on if the chosen Summer/Winter time for the hot water has expired the chosen programme.

Energy Efficiency and the Environment

Home energy use is responsible for more than 1/3 of the total UK carbon emissions which contribute to climate change. Heating and hot water systems based on fossil fuels account for 1/3 of the figure, so it is important to understand how your property and your thermostat maximize energy efficiency while maximizing your comfort.

Your Programmer should be used in conjunction with appropriate temperature controls. In order to save energy, the following general points should be observed:

1. Ensure your system contains a room thermostat and a hot water thermostat, and that both are set to appropriate temperature levels. Typically 20°C for the room temperature and between 55 – 60°C for the hot water temperature.
2. Programme your heating and hot water to go off when you are not in the house. If you are concerned about possible frost damage to any exposed pipe-work, it is advisable to fit a frost protection system – your dealer can advise you about this.
3. Think about how you use your domestic hot water – if you have a storage system, it is not necessary to have this switched on at all the time, even when you are in the house.
4. Consider the heat up times required for your central heating. Every house responds differently when the heating is switched on. Adjust the start time so that you are not cold when you get up in the morning. A shorter heat up time is required for other heating periods.
5. In the evening, after the house is up to temperature, it is often possible to switch off the heating up to an hour before you go to bed, without any noticeable reduction in comfort.
