**Hydrogen Bonding in Biological Structures** George A. Jeffrey,Wolfram Saenger,2012-12-06 Hydrogen bonds are weak attractions with a binding strength less than one tenth that of a normal covalent bond However hydrogen bonds are of extraordinary importance without them all wooden structures would collapse cement would crumble oceans would vaporize and all living things would disintegrate into random dispersions of inert matter Hydrogen Bonding in Biological Structures is informative and eminently usable It is in a sense a Rosetta stone that unlocks a wealth of information from the language of crystallography and makes it accessible to all scientists From a book review of Kenneth M Harmon Science 1992

**Geological Survey Water-supply Paper** ,1950 *The Electrodynamics of Water and Ice* Vasily Artemov,2021-04-20 This book is a research monograph summarizing recent advances related to the molecular structure of water and ice and it is based on the latest spectroscopic data available A special focus is given to radio and microwave frequency regions Within the five interconnected chapters the author reviews the electromagnetic waves interaction with water ice and moist substances discussing the microscopic mechanisms behind the dielectric responses Well established classic views concerning the structure of water and ice are considered along with new approaches related to atomic and molecular dynamics Particular attention is given to nanofluidics atmospheric science and electrochemistry The mathematical apparatus based on diverse approaches employed in condensed matter physics is widely used and allows the reader to quantitatively describe the electrodynamic response of water and ice in both bulk and confined states This book is intended for a wide audience covering physicists electrochemists geophysicists engineers biophysicists and general scientists who work on the electromagnetic radiation interaction with water and moist substances **Water Relationships in Foods** Harry Levine,Louise Slade,2013-11-21 This book was developed from the papers presented at a symposium on Water Relationships in Foods

which was held from April 10-14, 1989 at the 197th National Meeting of the American Chemical Society in Dallas, Texas under the auspices of the Agricultural and Food Chemistry Division of ACS. The editors of this book organized the symposium to bring together an esteemed group of internationally respected experts currently active in the field of water relationships in foods to discuss recent advances in the 1980s and future trends for the 1990s. It was the hope of all these contributors that this ACS symposium would become a memorable keystone above the foundation underlying the field of water in foods. This strong foundation has been constructed in large part from earlier technical conferences and books such as the four milestone International Symposia on the Properties of Water (ISOPOW I-IV), the recent IFT Basic Symposium on Water Activity and Penang meeting on Food Preservation by Moisture Control as well as the key fundamental contributions from the classic 1980 ACS Symposium Series 127 on Water in Polymers and from Felix Franks' famous seven-volume Comprehensive Treatise on Water plus five subsequent volumes of the ongoing Water Science Reviews. The objective of the 1989 ACS symposium was to build on this foundation by emphasizing the most recent and major advances.
