Difficult Subjects Badia Ahad-Legardy, OiYan A. Poon, 2023-07-03 *Difficult Subjects: Insights and Strategies for Teaching about Race, Sexuality, and Gender* is a collection of essays from scholars across disciplines, institutions, and ranks that offers diverse and multi-faceted approaches to teaching about subjects that prove both challenging and often uncomfortable for both the professor and the student. It encourages college educators to engage in forms of practice that do not pretend that teachers and students are unaffected by world events and incidents that highlight social inequalities. Readers will find the collected essays useful for identifying new approaches to taking on the difficult subjects of race, gender, and sexuality. The book will also serve as inspiration for academics who believe that their area of study does not allow for such pedagogical inquiries to also teach in ways that address difficult subjects. Contributors to this volume span a range of disciplines from criminal justice to gender studies to organic chemistry and demonstrate the productive possibilities that can emerge in college classrooms when faculty consider identity as constitutive of rather than divorced from their academic disciplines. Discussions of race, gender, and sexuality are always hot-button issues in the college classroom, whether they emerge in response to a national event or tragedy or constitute the content of the class over a

semester long term Even seasoned professors who specialize in these areas find it difficult to talk about identity politics in a room full of students And many professors for whom issues of racial and sexual identity is not a primary concern find it even more challenging to raise these issues with students Offering reflections and practical guidance the book accounts for a range of challenges facing college educators and encourages faculty to teach with courage and conviction especially when it feels as though the world around us is crashing down upon our students and ourselves **Neoliberal lives** Robert Chernomas,Ian Hudson,Mark Hudson,2019-07-01 This book is about the transformation of America that has occurred over the past thirty five years as capitalist logic has expanded into previously protected spheres of life This expansion has had devastating effects on the potential for human development Looking at how human beings create themselves and their worlds on material foundations of health and the natural environment through work and politics the book chronicles how neoliberalism has limited human potential At a time when neoliberalism s effects are stirring various forms of popular resistance and opposition this is a manifesto of sorts for the range of processes that need to be confronted if human potential is to be freed from the increasingly cramped quarters to which neoliberalism has confined it *Heteroglossia and Language Play in Multilingual Speech* Darren LaScotte,Elaine Tarone,2024-01-29 The studies in this volume show how multilingual learners use language play in second language acquisition to internalize sets of voices rather than decontextualized linguistic systems namely complexes of linguistic and non linguistic features incorporating the personalities of significant others In sociocultural terms these internalized heteroglossic voices become tools that learners can adapt and use playfully to enact chosen roles stances and identities in subsequent oral interactions Different chapters explore these sociocultural constructs using different approaches including variationist sociolinguistics conversation analysis translanguaging and positioning theory **Medical-Surgical Nursing** Linda Honan,2023-09-15 Confidently meet the demands of transitioning students into practice ready nurses with Medical Surgical Nursing Focus on Clinical Judgment 3rd Edition Expertly curated by experienced clinician and nursing educator Dr Linda Honan this practical approach distills complex concepts down to need to know details through the perspective of practicing nurses establishing a comprehensive foundation in medical surgical nursing by way of the most commonly encountered conditions and situations Extensive updates throughout this 3rd Edition broaden your students perspectives cultivate their clinical judgment and prepare them for success from the Next Generation NCLEX to the day to day challenges of today s medical surgical nursing practice Modern Mathematics Dirk De Bock,2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects

became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
