**North American Tunneling: 2014 Proceedings** Davidson, Gregg, Howard, Alan, Jacobs, Lonnie, Pintabona, Robert, Zernich, Brett, 2014-06-17 The North American Tunneling Conference is the premier forum to discuss new trends and developments in underground construction in North America. With every conference the number of attendees and breadth of topics grows. North American Tunneling 2014 Proceedings reflects the theme for the 2014 conference Mission Possible. The authors share new theories, novel innovations and the latest tools that make what once may have been perceived as impossible now possible. The authors of 128 papers share the latest case histories, expertise, lessons learned and real world applications from around the globe on a wide range of topics. They cover the successes and failures of challenging construction projects. Read about challenging design issues, fresh approaches on performance, future projects and industry trends as well as ground movement and support structure analysis, risk and cost management, rock tunnels, caverns and shafts, TBM technology and selection, and water and wastewater conveyance.

**CONCRETE Innovations in Materials, Design and Structures** FIB - International Federation for Structural Concrete, 2019-05-27 This Proceedings contains the papers of the fib Symposium CONCRETE Innovations in Materials Design and Structures which was held in May 2019 in Krakow Poland. This annual symposium was co-organized by the Cracow University of Technology. The topics covered include Analysis and Design, Sustainability, Durability, Structures, Materials and Prefabrication. The fib (Fédération internationale du bton) is a not-for-profit association formed by 45 national member groups and approximately 1000 corporate and individual members. The fib's mission is to develop at an international level the study of scientific and practical matters capable of advancing the technical, economic, aesthetic and environmental performance of concrete construction. The fib was formed in 1998 by the merger of the Euro International Committee for Concrete (the CEB) and the International Federation for Prestressing (the FIP). These predecessor organizations existed independently since 1953 and 1952 respectively.

**Seawater in Concrete Mix** Hidenori Hamada, Nobuaki Otsuki, Takahiro Nishida, 2021-09-30 In the near future many parts of the world will suffer from a shortage of freshwater. Effective use of seawater in concrete production could therefore become a crucial technology. Seawater in Concrete Mix provides a detailed overview of the fundamental knowledge of concrete engineering that is essential for the usage of seawater mixed concrete. According to the worldwide standard for reinforced concrete (RC), freshwater is typically used in concrete mixing rather than seawater. Yet a potential exists for the extensive use of seawater in concrete especially with the addition of ground granulated blast furnace slag, fly ash or other mineral admixtures. The recent trend toward performance based design makes this alternative more viable. The text is ideal for graduate students, researchers, concrete engineers and all civil engineers who deal with concrete for infrastructure. Hidenori Hamada is Professor of Kyushu University Japan. Nobuaki Otsuki is Professor Emeritus of Tokyo Institute of Technology and was Chairman of the JCI Technical Committee on the use of seawater in concrete. Takahiro Nishida is Senior Researcher of the Japanese National

Institute of Maritime Port and Aviation Technology     **Tools in Fluvial Geomorphology** G. Mathias Kondolf, Hervé Piégay, 2016-06-13 Fluvial Geomorphology studies the biophysical processes acting in rivers and the sediment patterns and landforms resulting from them. It is a discipline of synthesis with roots in geology, geography and river engineering and with strong interactions with allied fields such as ecology, engineering and landscape architecture. This book comprehensively reviews tools used in fluvial geomorphology at a level suitable to guide the selection of research methods for a given question. Presenting an integrated approach to the interdisciplinary nature of the subject, it provides guidance for researchers and professionals on the tools available to answer questions on river restoration and management. Thoroughly updated since the first edition in 2003 by experts in their subfields, the book presents state-of-the-art tools that have revolutionized fluvial geomorphology in recent decades such as physical and numerical modelling, remote sensing and GIS, new field techniques, advances in dating, tracking and sourcing, statistical approaches, as well as more traditional methods such as the systems framework, stratigraphic analysis, form and flow characterisation and historical analysis. This book covers five main types of geomorphological questions and their associated tools: historical framework, spatial framework, chemical, physical and biological methods, analysis of processes and forms, and future understanding framework. Provides guidance on advantages and limitations of different tools for different applications, data sources, equipment and supplies needed, and case studies illustrating their application in an integrated perspective. It is an essential resource for researchers and professional geomorphologists, hydrologists, geologists, engineers, planners and ecologists concerned with river management, conservation and restoration. It is a useful supplementary textbook for upper-level undergraduate and graduate courses in Geography, Geology, Environmental Science, Civil and Environmental Engineering, and interdisciplinary courses in river management and restoration.

**Coral Reef Studies of Japan** Akira Iguchi, Chuki Hongo, 2018-02-15 This book comprehensively introduces recent important studies on coral reefs from various research fields including biology, ecology, chemistry, the earth sciences and conservation studies. Coral reef is one of the important ecosystems characterized by high biodiversity and the beauty. Coral reefs around Japan are located at the northern limit composed mainly by fringing reefs along archipelago and easily impacted by human activities. Thus, coral reef studies around Japan have provided important knowledge on basic sciences and conservation studies regarding coral reef ecosystem. This book would contribute to systematic understanding of vulnerable coral reef ecosystems due to human activities in the Indo-Pacific and Caribbean regions. The conservation efforts provide good reference to graduate and undergraduate students and researchers in marine sciences as well as those who are involved in coral reef studies.
