MindXpres: Conceptual and Technical Foundations for Next Generation Presentation Solutions

Reinout Roels, 2019-05-27 Presentation tools such as PowerPoint were initially created to simulate physical slides and have inherited a lot of their limitations. In this dissertation we identify the shortcomings and unmet user needs in presentation software by means of literature study, observations, a survey, and the programmatic analysis of over 12000 PowerPoint documents. The results indicate that user needs are slowly evolving while existing software has hardly changed over the last 30 years. We motivate the need to rethink the concept of a presentation and we provide conceptual and technical foundations that can enable interoperable and well integrated solutions for the identified shortcomings. The resulting MindXpres platform consists of a new conceptual framework, content model, information system, and presentation engine. We present MindXpres as a presentation platform that enables researchers and developers to build innovative presentation solutions that cannot be implemented in the existing tools. We further demonstrate the flexibility of the MindXpres platform by discussing a wide range of proof of concept plug-in solutions for the identified shortcomings and unmet user needs.

Basics of Economic Geography Kanan Chatterjee, 2015-01-01 Economic activities are governed by few basic principles. This book elucidates the basic paradigm of economic geography. Basic issues in economic geography have hardly been studied in depth and an interdisciplinary approach towards the investigation of problems relating to the economic growth and development has not been attempted. Geographers are engaged in planning resources and their utilization and have shown their importance in national and international agencies that deal with the study, inventory, and administration of natural and human resources. This book will evoke considerable interest amongst the reading public in other disciplines of commerce, economics, agriculture, service sector, etc. It will definitely inspire other researchers to make comparable enquiries in future as well. The academic institutions, teachers, and students of undergraduate and postgraduate level may find that it covers their course contents in one way or other. It is hoped that the publication will generate desired enthusiasm and thinking in this field.

Handbook of Construction Safety, Health and Well-being in the Industry 4.0 Era Patrick Manu, Gao Shang, Paulo Jorge Silva Bartolo, Valerie Francis, Anil

Sawhney, 2023-05-12 This Handbook seeks to examine and advance current understanding of the confluence of construction health, safety, and well-being and the broad range of Industry 4.0 technologies in use in the architecture, engineering, and construction (AEC) industry. Globally, the construction sector accounts for more than 100,000 occupational fatalities annually. In many countries, reports of work-related accidents, injuries, and illnesses are commonplace, and there is an urgent need to improve the occupational safety and health (OSH) outlook of the construction sector. The fourth industrial revolution presents

opportunities to leverage modern technologies e.g. big data, artificial intelligence, automation, sensors, AR, VR, and robotics to improve the poor OSH performance of the construction industry. However, embracing such technologies could also induce unintended adverse consequences for the safety, health, and well-being of construction workers. Therefore, the realisation of the opportunities as well as the mitigation of potentially adverse consequences requires research-informed, holistic insights around the union of Industry 4.0 and construction occupational safety and health management. This cutting-edge volume addresses a significant gap in literature by bringing together experienced academics and researchers to highlight the drivers, opportunities, and drawbacks of the merging of Industry 4.0 with construction health, safety, and well-being. After a detailed introductory section which highlights key issues and challenges, section one covers the application of a broad range of digital technologies; then, section two discusses the application of industrial production and cyber-physical systems in the context of construction safety and health management. Readers from a broad range of AEC backgrounds as well as safety professionals and technologists will come to understand how the technologies are applied and the resulting OSH benefits as well as potential drawbacks.
