tire leaks or an electric light switch fails if we are short changed at a department store or erroneously billed for phone calls not made if a plane departure is delayed due to a mechanical failure these are rather ordinary annoyances which we have come to accept as normal occurrences Contrast this with failure of a food product If foreign matter is found in a food if a product is discolored or crushed if illness or discomfort occurs when a food product is eaten the consumer reacts with anger fear and sometimes mass hysteria The offending product is often returned to the seller or a disgruntled letter is written to the manufacturer In an extreme case an expensive law suit may be filed against the company The reaction is almost as severe if the failure is a difficult to open package or a leaking container There is no tolerance for failure of food products Dozens of books on quality written for hardware or service industries discuss failure rates product reliability serviceability maintainability warranty and repair Manufacturers in the food industry cannot use these measurements food reliability must be 100% failure rate 0% Serviceability maintainability warranty and repair are meaningless terms to food processors
