Gleanings in Bee Culture ,1886 ICSE-The Science Orbit(Bio)-TB-08-R Bisht Dr Neeta, Dr Neeta Bisht has almost two decades of teaching experience in various reputed schools At present she is the head of department in a school in Hyderabad Her knowledge and expertise are the hallmark of the series *Understanding Cancer* David Tarin,2023-02-02 This book provides a unique wide ranging description of the phenomenon of cancer and its pathological effects in diverse species including humans domesticated and wild animals invertebrates and plants The broad scope of information presented is used to construct radical new insights into biological self regulation and explain their relevance to its disruption by cancerous growth and spread within the human body Mechanisms of action of carcinogenic agents initiation progression metastasis inappropriate gene expression dormancy latency regression and reasons for susceptibility and or resistance to cancer are all considered Also discussed are criteria for pathological diagnosis advances in treatment implications for public health and pitfalls in diagnosis and interpretation of experimental results The book describes operational mechanisms of cancer at the levels of whole individual organ tissue cell molecular and even atomic quantum scales of structural and physiological order

Evidence is assembled from all these levels of organization to show that cancer is a dynamically changing disorder and that it is an inherent and perpetual risk of multicellular composition. This provides pragmatic new biological and clinical perspectives on malignant neoplasia. The biological insight is that it is a consequence of progressing miscommunication within a cellular society. The clinical perspective is realistic but optimistic in reasoning that although cancer can never be completely eradicated from human life because it is a disorder of our intrinsic biological constitution, it can be controlled and ameliorated and even cured in a proportion of individuals. The text is profusely illustrated with over 300 macroscopic and microscopic pictures. It will stimulate curiosity and interest specialists as well as beginners in many scientific disciplines and provides copious references to the medical and scientific literature supporting its conclusions. Readers from fields as diverse as medicine, pathology, veterinary sciences, cell biology, molecular biology, developmental biology, and epidemiology will find the information the book contains thought provoking, interesting, and useful. Additionally, specialists in occupational and environmental health and legal experts focusing on exposure to carcinogenic materials and pollution will find the contents valuable and informative.
