Memo Natural Sciences 2014:

Researching Higher Education in Asia Jisun Jung, Hugo Horta, Akiyoshi Yonezawa, 2017-09-05 This book discusses higher education research as a field of study in Asia. It traces the evolution of research in the field of higher education in several Asian countries and shares ideas about the evolving higher education research communities in Asia. It also identifies common and dissimilar challenges across national communities providing researchers and policymakers essential new insights into the relevance of a greater regional articulation of national higher education research communities and their further integration into and contribution to the international higher education research community as a whole.

Cooperating for the Climate Joanna I. Lewis, 2023-03-07 The intricacies politics and prospects of international cooperation particularly with China to address climate change. No country in the world releases more greenhouse gases than China. And no country has a greater capacity and ambition to mitigate climate change. This deeply informed urgently needed book examines the global cooperation such a monumental effort demands and inspires necessarily focusing on China's outsized role in the development and dissemination of clean energy technologies. Drawing on decades of work in clean energy and climate technology and policy, Joanna Lewis provides a clear and thorough account of the motivations science and politics behind international clean energy technology collaboration and an in-depth look at why different clean energy partnerships result in different political and technological outcomes. The first comprehensive analysis of international clean energy partnerships with China. *Cooperating for the Climate* is based on hundreds of interviews with government officials, researchers, and private companies involved in these collaborative initiatives around the world. Its insights into energy innovation and international relations as well as global environmental politics will help international stakeholders navigate the complex political bureaucracy governing clean energy development in China and perhaps chart a productive pathway for moving the world toward a low carbon future.

Seven Skeletons Lydia V. Pyne, 2016 A science historian describes seven famous ancestral fossils that have become known around the world including the three foot tall hobbit from Flores, the Neanderthal of La Chapelle, the Taung Child, the Piltdown Man, the Peking Man, Australopithecus sediba, and Lucy. **Radical Interactionism and Critiques of Contemporary Culture** Norman K. Denzin, 2021-04-30 Norman K. Denzin has gathered a team of leading experts to explore and showcase a variety of topics in the field of symbolic interaction. Some of the topics explored include extending dramaturgical and grounded theory and new empirical and theoretical inquiries into fashion, journalism, stigma, police, body work, autobiography, and gender studies.

Of Whales and Dinosaurs Kevin Y.L. Tan, 2015-04-18 Singapore's collection of Southeast Asian animals, one of the world's largest, dates back to the old Raffles Museum, officially established in 1878. With the opening of the Lee Kong Chian Natural History Museum in 2015, the original Raffles Museum has reincarnated, and the loop on its remarkable 127-year history has closed. Beneath the sleek exterior of today's modern museum building lies a saga of titanic struggles and changes. That the collections survived at all through the multiple challenges of the

nineteenth century the disruption of World War Two and its potential disintegration in the face of Singapore's modernization is nothing short of miraculous This book is not only an institutional history of the museum but also tells the story of frustrations commitment and courage of the numerous individuals who battled officialdom innovated endlessly and overcame the odds to protect Singapore's natural history heritage The book features 108 historical photographs and natural history illustrations printed in full colour throughout

The Future of Natural History Museums Eric Dorfman, 2017-10-12 Natural history museums are changing both because of their own internal development and in response to changes in context Historically the aim of collecting from nature was to develop encyclopedic assemblages to satisfy human curiosity and build a basis for taxonomic information Today with global biodiversity in rapid decline there are new reasons to build and maintain collections while audiences are more diverse numerous and technically savvy Institutions must learn to embrace new technology while retaining the authenticity of their stories and the value placed on their objects The Future of Natural History Museums begins to develop a cohesive discourse that balances the disparate issues that our institutions will face over the next decades It disassembles the topic into various key elements and through commentary and synthesis explores a cohesive picture of the trajectory of the natural history museum sector This book contributes to the study of collections teaching and learning ethics and running non profit businesses and will be of interest to museum and heritage professionals and academics and senior students in Biological Sciences and Museum Studies

Philanthropic Foundations in International Development Patrick Kilby, 2021-05-03 This book focuses on the influence of philanthropic foundations in global development and on how the global south has engaged with them The idea of corporate philanthropy stretches back a long way with the late 19th industrialist Andrew Carnegie seeing it as an important obligation of the very wealthy In the modern day Bill Gates has taken up this call suggesting that the very wealthy should donate half their wealth to philanthropic causes and endowing his own foundation with something in the order of 50 billion This book brings together case studies of the most influential of these foundations over the last one hundred years the Rockefeller Ford and Gates Foundations investigating their impact on education and research health and agriculture The book concludes by asking whether global south foundations such as Al Waleed Philanthropies Tata Trusts and those from China may point to the future of global philanthropic foundations The sheer scale of resources that foundations can devote to their work results in significant influence in global politics to the point that Foundations can drive and even set government policy This influence is likely to grow in the post Covid environment making this book an important resource for researchers practitioners and policy makers working on global development

Rural Communities Cornelia Butler Flora, 2018-03-05 Communities in rural America are a complex mixture of peoples and cultures ranging from miners who have been laid off in West Virginia to Laotian immigrants relocating in Kansas to work at a beef processing plant to entrepreneurs drawing up plans for a world class ski resort in California's Sierra Nevada Rural Communities Legacy and Change uses its unique Community Capitals framework

to examine how America's diverse rural communities use their various capitals: natural, cultural, human, social, political, financial, and built to address the modern challenges that face them. Each chapter opens with a case study of a community facing a particular challenge and is followed by a comprehensive discussion of sociological concepts to be applied to understanding the case. This narrative-topical approach makes the book accessible and engaging for undergraduate students while its integrative approach provides them with a framework for understanding rural society based on the concepts and explanations of social science. This fifth edition is updated throughout with 2013 census data and features new and expanded coverage of health and health care, food systems, and alternatives, the effects of neoliberalism and globalization on rural communities, as well as an expanded resource and activity section at the end of each chapter.

Forced Marriage and 'Honour' Killings in Britain Christina Julios, 2016-03-09 This book explores the contemporary phenomenon of forced marriage and honour killings in Britain. Set against a background of increasing honour-based violence within the country's South Asian and Muslim Diasporas, the book traces the development of the honour question over the past two decades. It accordingly witnesses unprecedented changes in public awareness and government policy, including ground-breaking honour-specific legislation and the criminalisation of forced marriage. All of which makes Britain an important context for the study of this now indigenous and self-perpetuating social problem. In considering the scale of the challenge and its underlying causes, attention is paid to the intersections of gendered power structures that disadvantage female members of honour cultures, as well as feminist theories that seek to explain them. The book features five key case studies of honour killings and draws from a wide range of narratives, including those of honour violence survivors, grassroots service providers, and legislators. Such a myriad of perspectives reveals the complexity of the honour issue and the deep ideological divisions that characterise it. With the UK's multiculturalist discourse unable to reconcile protecting patriarchal minority cultures with safeguarding gender equality and human rights, the book raises fundamental questions about the country's future direction. Following a long trend of state-sponsored integrationist policies, the government's response to the honour question points decisively in the direction of a post-multicultural British nation.

Approaches to Understanding the Cumulative Effects of Stressors on Marine Mammals National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Ocean Studies Board, Committee on the Assessment of the Cumulative Effects of Anthropogenic Stressors on Marine Mammals, 2017-05-04

Marine mammals face a large array of stressors, including loss of habitat, chemical and noise pollution, and bycatch in fishing, which alone kills hundreds of thousands of marine mammals per year globally. To discern the factors contributing to population trends, scientists must consider the full complement of threats faced by marine mammals. Once populations or ecosystems are found to be at risk of adverse impacts, it is critical to decide which combination of stressors to reduce to bring the population or ecosystem into a more favorable state. Assessing all stressors facing a marine mammal population also

provides the environmental context for evaluating whether an additional activity could threaten it Approaches to Understanding the Cumulative Effects of Stressors on Marine Mammals builds upon previous reports to assess current methodologies used for evaluating cumulative effects and identify new approaches that could improve these assessments This review focuses on ways to quantify exposure related changes in the behavior health or body condition of individual marine mammals and makes recommendations for future research initiatives

An Introduction to Design Science Paul Johannesson,Erik Perjons,2021-09-20

This book is an introductory text on design science intended to support both graduate students and researchers in structuring undertaking and presenting design science work It builds on established design science methods as well as recent work on presenting design science studies and ethical principles for design science and also offers novel instruments for visualizing the results both in the form of process diagrams and through a canvas format While the book does not presume any prior knowledge of design science it provides readers with a thorough understanding of the subject and enables them to delve into much deeper detail thanks to extensive sections on further reading Design science in information systems and technology aims to create novel artifacts in the form of models methods and systems that support people in developing using and maintaining IT solutions This work focuses on design science as applied to information systems and technology but it also includes examples from and perspectives of other fields of human practice Chapter 1 provides an overview of design science and outlines its ties with empirical research Chapter 2 discusses the various types and forms of knowledge that can be used and produced by design science research while Chapter 3 presents a brief overview of common empirical research strategies and methods Chapter 4 introduces a methodological framework for supporting researchers in doing design science research as well as in presenting their results This framework includes five core activities which are described in detail in Chapters 5 to 9 Chapter 10 discusses how to communicate design science results while Chapter 11 compares the proposed methodological framework with methods for systems development and shows how they can be combined Chapter 12

discusses how design science relates to research paradigms in particular to positivism and interpretivism and Chapter 13 discusses ethical issues and principles for design science research The new Chapter 14 showcases a study on digital health consultations and illustrates the whole process in one comprehensive example Also added to this 2nd edition are a number of sections on practical guidelines for carrying out basic design science tasks a discussion on design thinking and its relationship to design science and the description of artefact classifications Eventually both the references in each chapter and the companion web site were updated to reflect recent findings

A Review of the Landscape Conservation Cooperatives National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Board on Atmospheric Sciences and Climate, Committee on the Evaluation of the Landscape Conservation Cooperatives, 2016-11-28 The United States tradition of conserving fish wildlife habitats and cultural resources dates to the mid 19th century States have long sought to manage fish and wildlife species within their borders whereas many early federal conservation efforts focused on setting aside specific places as parks sanctuaries or reserves With advances in landscape ecology over the past quarter century conservation planners scientists and practitioners began to stress the importance of conservation efforts at the scale of landscapes and seascapes These larger areas were thought to harbor relatively large numbers of species that are likely to maintain population viability and sustain ecological processes and natural disturbance regimes often considered critical factors in conserving biodiversity By focusing conservation efforts at the level of whole ecosystems and landscape practitioners can better attempt to conserve the vast majority of species in a particular ecosystem Successfully addressing the large scale interlinked problems associated with landscape degradation will necessitate a planning process that bridges different scientific disciplines and across sectors as well as an understanding of complexity uncertainty and the local context of conservation work The landscape approach aims to develop shared conservation priorities across jurisdictions and across many resources to create a single collaborative conservation effort that can meet stakeholder needs Conservation of habitats species ecosystem services and cultural resources in the face of multiple stressors requires governance structures that can bridge the geographic and jurisdictional boundaries of the complex socio ecological systems in which landscape level conservation occurs The Landscape Conservation Cooperatives LCC Network was established to complement and add value to the many ongoing state tribal federal and nongovernmental efforts to address the challenge of conserving species habitats ecosystem services and cultural resources in the face of large scale and long term threats including climate change A Review of the Landscape Conservation Cooperatives evaluates the purpose goals and scientific merits of the LCC program within the context of similar programs and whether the program has resulted in measurable improvements in the health of fish wildlife and their habitats

Pathways to Reform Alexandra W. Logue, 2017-09-08 A personal account of the implementation of a controversial credit transfer program at the nation's third largest university Change is notoriously difficult in any large organization Institutions of higher education are no exception From 2010 to 2013 Alexandra Logue then chief academic officer of The City University of New York led a controversial reform initiative known as Pathways The program aimed to facilitate the transfer of credits among the university's nineteen constituent colleges in order to improve graduation rates a long recognized problem for public universities such as CUNY Hotly debated Pathways met with vociferous resistance from many faculty members drew the attention of local and national media and resulted in lengthy legal action In Pathways to Reform Logue the figure at the center of the maelstrom blends vivid personal narrative with an objective perspective to tell how this hard fought plan was successfully implemented at the third largest university in the United States Logue vividly illustrates why change does or does not take place in higher education and the professional and personal tolls exacted Looking through the lens of the Pathways program and factoring in key players she analyzes how governance structures and conflicting interests along with other institutional factors impede change which Logue shows is all too rare slow and costly In this environment she argues it is shared governance combined with a strong central decision making authority that best facilitates necessary reform Logue presents a compelling investigation of not only transfer policy but also power dynamics and university leadership Shedding light on the inner workings of one of the most important public institutions in the nation Pathways to Reform provides the first full account of how despite opposition a complex higher education initiative was realized All net royalties received by the author from sales of this book will be donated to The City University of New York to support undergraduate student financial aid
