Handbook of Research on Facilitating Collaborative Learning Through Digital Content and Learning Technologies Keengwe, Jared, 2022-12-28. Digital content and learning technologies are now the norm at all levels of education. However, there is evidence to suggest that this digital shift is on a spectrum and the spectrum impacts learners in different ways. This means that some instructors who seek to integrate digital content may do so using traditional teaching methods, while others use innovative practices to engage learners. Those who integrate innovative digital practices align their instructional practice with theories to facilitate student-centered pedagogies that support and improve the depth and scope of student learning. A primary characteristic of student-centered learning is facilitating collaborative learning using digital content and learning technologies to engage students as well as to enhance meaningful learning. The Handbook of Research on Facilitating Collaborative Learning Through Digital Content and Learning Technologies provides K-20 educators with alternative pedagogical and andragogical models that are innovative and incorporate digital content and learning technologies that promote constructive learning. Further, this book explores the relationship between constructivist learning, digital content, and learning technologies. A primary argument in this book is that constructivist teaching strategies such as collaborative learning, coupled with digital content and purposeful learning technologies, could benefit student learning in ways that are different from those practiced in traditional non-digital learning environments. Covering topics such as instructional design, self-efficacy, and library engagement, this major reference work is an essential resource for pre-service teachers, teacher educators, faculty, and administrators of K-20 education, librarians, researchers, and academicians.

The Trials of Evidence-based Education explores the promise, limitations, and achievements of evidence-based policy and practice as the attention of funders moves from a sole focus on attainment outcomes to political concern about character building and wider educational impacts. Providing a detailed look at the pros, cons, and areas for improvement in evidence-based policy and practice, this book includes consideration of the following: What is involved in a robust evaluation for education? The issues in conducting trials and how to assess the trustworthiness of research findings. New methods for the design, conduct, analysis, and use of evidence from trials and examining their implications. What policy makers, head teachers, and practitioners can learn from the evidence to inform practice. In this well-structured and thoughtful text, the results and implications of over 20 studies conducted by the authors are combined with a much larger number of studies from their systematic reviews, and the implications are spelled out for the research community, policy makers, schools wanting to run their own evaluations, and for practitioners using
