

Siemens Hicom 300 E CS

The RIC collects call information and transmits it to the Octel 200/300 message server which then answers the call with a free analog port.

1.0 METHOD OF INTEGRATION

Each ROLM Interface Card (RIC) simulates four digital RolmPhone stations on the PBX. When a call is received by the RIC, the digital display provides call information. The RIC collects this data, transmits the call information to the Octel CPU and picks the call from an available analog (LIC) voice port. The Octel server then immediately answers the call with the appropriate greeting. The RIC circuit is then free to process further calls. Message-waiting indicators are set and canceled via analog (LIC) voice ports using In-band message waiting codes on the Siemens Hicom 300 E CS.

2.0 OCTEL 200/300 MESSAGE SERVER ORDERING INFORMATION

- ROLM Integration card (RIC) (PN 300-6025-001) If more than four digital display ports are required, an additional RIC card is required.
- Adaptive Integration (AI) software is included with ROLM integration card.
- LIC4, LIC8, or DLC16 (4,8 or 16 ports)
- Disk drives

Octel 200/300 message server requirements

Hicom 300 Config Guide
