and chemical reaction networks in detail Each chapter ends with a section written by a leading expert Examples in the book include oil wells HIV infection phylogenetic models four bar mechanisms border rank font design Stewart Gough platforms rigidity of edge graphs Gaussian graphical models geometric constraint systems and enzymatic cascades The reader will encounter geometric objects such as Bzier patches Cayley Menger varieties and toric varieties and algebraic objects such as resultants Rees algebras approximation complexes matroids and toric ideals Two important subthemes that appear in multiple chapters are toric varieties and algebraic statistics The book also discusses the history of elimination theory including its near elimination in the middle of the twentieth century The main goal is to inspire the reader to learn about the topics covered in the book With this in mind the book has an extensive bibliography containing over 350 books and papers

**How JavaScript Works** Douglas Crockford, 2018-10-18 Douglas Crockford starts by looking at the fundamentals names numbers booleans characters and bottom values JavaScript's number type is shown to be faulty and limiting but then Crockford shows how to repair those problems He then moves on to data structures and functions exploring the underlying mechanisms and then uses higher order functions to achieve class free object oriented programming The book also looks at eventual programming testing and purity all the while looking at the requirements of The Next Language Most of our languages are deeply rooted in the paradigm that produced FORTRAN Crockford attacks those roots liberating us to consider the next paradigm He also presents a strawman language and develops a complete transpiler to implement it The book is deep dense full of code and has moments when it is intentionally funny
