Feelgood Richard A. Lertzman, William J. Birnes, 2013-05-01 Doctor Max Jacobson, whom the Secret Service under President John F. Kennedy code named Dr. Feelgood, developed a unique energy formula that altered the paths of some of the twentieth century's most iconic figures including President and Jackie Kennedy, Marilyn Monroe, Frank Sinatra, and Elvis. JFK received his first injection, a special mix of vitamins and hormones, according to Jacobson just before his first debate with Vice President Richard Nixon. The shot into JFK's throat not only cured his laryngitis but also diminished the pain in his back, allowed him to stand up straighter, and invigorated the tired candidate. Kennedy demolished Nixon in that first debate and turned a tide of skepticism about Kennedy into an audience that appreciated his energy and crispness. What JFK didn't know then was that the injections were actually powerful doses of a combination of highly addictive liquid methamphetamine and steroids. Author and researcher Rick Lertzman and New York Times bestselling author Bill Birnes reveal heretofore unpublished material about the mysterious Dr. Feelgood. Through well-researched prose and interviews with celebrities including George Clooney, Jerry Lewis, Yogi Berra, and Sid Caesar, the authors reveal Jacobson's vast influence on events such as the assassination of JFK, the Cuban Missile Crisis, the Kennedy-Khrushchev Vienna Summit, the murder of Marilyn Monroe, the filming of the C. B. DeMille classic *The Ten Commandments*, and the work of many of the great artists of that era. Jacobson destroyed the lives of several famous patients in the entertainment industry and accidentally killed his own wife, Nina, with an overdose of his formula. **Safe Science**

National Research Council, Division of Behavioral and Social Sciences and Education, Board on Human-Systems Integration, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Committee on Establishing and Promoting a Culture of Safety in Academic Laboratory Research, 2014-10-08 Recent serious and sometimes fatal accidents in chemical research laboratories at United States universities have driven government agencies, professional societies, industries, and universities themselves to examine the culture of safety in research laboratories. These incidents have triggered a broader discussion of how serious incidents can be prevented in the future and how best to train researchers and emergency personnel to respond appropriately when incidents do occur. As the priority placed on safety increases, many institutions have expressed a desire to go beyond simple compliance with regulations to work toward fostering a strong positive safety culture, affirming a constant commitment to safety throughout their institutions while integrating safety as an essential element in the daily work of laboratory researchers. **Safe Science** takes on this challenge. This report examines the culture of safety in research institutions and makes recommendations for

university leadership laboratory researchers and environmental health and safety professionals to support safety as a core value of their institutions The report discusses ways to fulfill that commitment through prioritizing funding for safety equipment and training as well as making safety an ongoing operational priority A strong positive safety culture arises not because of a set of rules but because of a constant commitment to safety throughout an organization Such a culture supports the free exchange of safety information emphasizes learning and improvement and assigns greater importance to solving problems than to placing blame High importance is assigned to safety at all times not just when it is convenient or does not threaten personal or institutional productivity goals Safe Science will be a guide to make the changes needed at all levels to protect students researchers and staff
