Reproduction in Cattle Peter J. H. Ball, Andy R. Peters, 2008-04-15. Cattle play a fundamental role in animal agriculture throughout the world. They not only provide us with a vital food source but they also provide us with fertilizer and fuel. Keeping reproduction levels at an optimum level is therefore essential, but this is often a complicated process, especially with modern high-yielding cows. Written in a practical and user-friendly style, this book aims to help the reader understand cattle reproduction by explaining the underlying physiology of the reproductive process and the role and importance of pharmacology and technology, and showing how management techniques can improve reproductive efficiency. This edition includes recent research findings on the physiology of the oestrous cycle and its control. New techniques for monitoring and manipulating reproduction, including pregnancy diagnosis and embryo transfer. Advice on identifying common infertility problems and how to prevent and treat them.

Reproduction in Cattle 3e is essential reading for veterinary and agricultural students as well as veterinarians and farmers involved in cattle reproduction.

Reproductive Geographies Marcia England, Maria Fannin, Helen Hazen, 2018-12-07. The sites, spaces, and subjects of reproduction are distinctly geographical. Reproductive geographies span different scales: body, home, local, national, global, and movements across space. This book expands our understanding of the socio-cultural and spatial aspects of fertility, pregnancy, and birth. The chapters directly address global perspectives, the future of reproductive politics, and state-focused approaches to the politicisation of fertility, pregnancy, and birth. The book provides up-to-date explorations on the changing landscapes of reproduction, including the expansion of reproductive technologies such as surrogacy and intrauterine insemination. Contributions in this book focus on phenomenologically inspired accounts of women's lived experience of pregnancy and birth, the biopolitics of birth and citizenship, the material histories of reproductive tissues as scientific objects and engagements with public health and development policy. This is an essential resource for upper-level undergraduates and graduates studying topics such as Sociology, Geographies of Gender, Women's Studies, and Anthropology of Health and Medicine.
