Melting Away Images Of The Arctic And Antarctic:

Melting Away Camille Seaman, 2014-12-02 For ten years Camille Seaman has documented the rapidly changing landscapes of Earth's polar regions. As an expedition photographer aboard small ships in the Arctic and Antarctic she has chronicled the accelerating effects of global warming on the jagged face of nearly fifty thousand icebergs. Seaman's unique perspective of the landscape is entwined with her Native American upbringing; she sees no two icebergs as alike; each responds to its environment uniquely, almost as if they were living beings. Through Seaman's lens, each towering chunk of ice, breathtakingly beautiful in layers of smoky gray and turquoise blue, takes on a distinct personality, giving her work the feel of majestic portraiture. *Melting Away* collects seventy-five of Seaman's most captivating photographs, life-affirming images that reveal not only what we have already lost but more importantly what we still have that is worth fighting to save.

Environmental Communication and the Public Sphere Phaedra C. Pezzullo, Robert Cox, 2017-10-24 This is the best undergraduate text devoted to environmental communication. It's the standard book for an introduction to the field. Jeffrey L. Courtright, Illinois State University. The Fifth Edition of the award-winning *Environmental Communication and the Public Sphere* remains the most comprehensive introductory text in the growing field of environmental communication. This groundbreaking book focuses on the role that human communication plays in influencing the ways we perceive the environment. It also examines how we define what constitutes an environmental problem and how we decide what actions to take concerning the natural world. In the highly anticipated Fifth Edition, internationally recognized researcher Phaedra Pezzullo and three-time Sierra Club President Robert Cox leverage their vast experience to offer insights into the news media, Congress, environmental conflict, advocacy campaigns, and other real-world applications of environmental communication. This edition also explores recent events: the Trump Administration, wolf conservation, public land milestones, the Flint water crisis, corporate disinformation campaigns, new alliances for a just transition in a growing renewable energy economy, the People's Climate March, international legal precedents, and more to illustrate key terms and the significance of environmental communication.

Environmental Communication and the Public Sphere Robert Cox, Phaedra C. Pezzullo, 2015-04-17 The Fourth Edition of *Environmental Communication and the Public Sphere* remains the only comprehensive introduction to the growing field of environmental communication, ranging from an historical overview of key terms to important legal and technological developments. This innovative book focuses on how human communication influences the way we perceive and act in the environment. It also examines how we interpret environmental problems and decide what actions to take with regard to the natural world. Three-time president of the Sierra Club, the largest environmental group in the United States, lead author Robert Cox leverages his vast experience to offer insights into the news media, Congress, environmental conflict, advocacy campaigns, and other real-world applications of environmental communication. New coauthor Phaedra Pezzullo brings two decades of applied experience working with grassroots environmental justice and health organizations, citizen

advisory boards and student led campaigns as well as her internationally recognized research on toxic pollution social injustices public advocacy and more The authors introduce the reader to the major areas terms and debates of this evolving field The Fourth Edition incorporates major revisions that include four new chapters on visual and popular culture digital media and activism the sustainability of college and corporation campuses and the legal standing of citizens and nature Updates throughout the text draw on timely topics including visual communication used in climate science campaigns fracking and challenges to the right to know plastic bag bans consumer apps digital activism for environmental justice green marketing and arguments on giving legal rights to nonhuman entities from dolphins to rivers

Meltdown Jorge Daniel Taillant, 2021 We hear about pieces of ice the size of continents breaking off of Antarctica rapidly melting glaciers in the Himalayas and ice sheets in the Arctic crumbling to the sea but does it really matter Will melting glaciers change our lives Absolutely The ice ages and the interglacial periods like we live in now are built and destroyed by glaciers Glaciers hold three quarters of our freshwater yet we don't have laws to protect them from climate change Melting glaciers raise the seas alter global ecosystems warm our climate and bring on floods that swamp millions of acres of land destroying coastal ecosystems and leaving hundreds of millions homeless Healthy glaciers help keep our planet cool by reflecting solar heat away from the Earth and provide critical freshwater supply to billions that live within their meltwater runoff basins But melting glaciers alter ocean temperature warm the atmosphere and cause havoc to the ocean currents and to the global jet stream causing inclement weather prolonged and recurrent droughts heavy rains and intense frequent and unpredictable storms As glaciers melt away their critical environmental functions and services will wither And as climate change warms their core their weakening internal structure will cause a growing number of glacier tsunamis that can send deadly massive ice blocks rocks earth and billions of liters of water rushing down mountain valleys that take out anything in their path It has happened before in the Himalayas in the Central Andes in the Rockies and Western Cascades and in the European Alps and it will happen again As glaciers melt so do the vast swaths of permafrost environments that thrive in their surroundings where thawing millenary terrain rich in ice but also in methane gas captured hundreds of thousands of years ago is now released into the atmosphere intensifying climate change even further In his new book Meltdown Jorge Daniel Taillant takes readers deeper into the cryosphere and connects the dots between climate change glacier melt and the impacts that receding glacier ice brings to livability on Earth to our environments and to our neighborhoods He walks us through the little known realm of the periglacial environment a world where invisible subsurface rock glaciers with solid ice cores that will outlive exposed glaciers in our warming climate but will they suffice to maintain our cryosphere and climate ecology in balance In two closing chapters Taillant looks at actions that can help stop climate change and save glaciers and also contrasts how society politics and our leaders have responded to address the COVID 19 pandemic and yet largely failed to address the even larger looming and escalating crisis of climate change Meltdown is about glaciers and their unfolding demise during one of the most critical

moments of our climate crisis We may still be in time to save the cryosphere if we can reconsider glaciers in a whole new light and understand the critical role they play in our own sustainability and if we can awaken to see how through glacier melt geological ages are changing right before our eyes **Arts-Based Research** Jan Jagodzinski, Jason Wallin, 2013-04-19

A provocative book an important book jagodzinski s and Wallin s betrayal is in fact a wake up call for art based research a loving critique of its directions jagodzinski s and Wallin s reference is the question what art can do not what it means Theirs is an ultimate affirmation that uncovers the singularities that compose and give consistency to art not as an object but as an event Their betrayal consists in an affirmation of life and becoming positing a performative machinics of the arts which is in absolute contraposition with the hegemonic discourse of art and as an object of knowledge and representation This does not only concern academia but also politics and ethics an untimely book that comes just at the right time Bernd Herzogenrath Goethe Universit t Frankfurt am Main Germany author of An American Body Politic A Deleuzian Approach and editor of Deleuze Pedagogies Against the State Arctic Tipping Points Paul Wassmann, 2011 **The Atlas of Global**

Recent Climate Change Impacts on Mountain Glaciers Mauri Pelto, 2017-01-17 Glaciers are considered a key and an iconic indicator of climate change The World Glacier Monitoring Service has noted that global alpine balance has been negative for 35 consecutive years This highlights the dire future that alpine glaciers face The goal of this volume is to tell the story glacier by glacier of response to climate change from 1984 2015 Of the 165 glaciers examined in 10 different alpine regions 162 have retreated significantly It is evident that the changes are significant not happening at a glacial pace and are profoundly affecting alpine regions There is a consistent result that reverberates from mountain range to mountain range which emphasizes that although regional glacier and climate feedbacks differ global changes are driving the response This book considers ten different glaciated regions around the individual glaciers and offers a different tune to the same chorus of glacier volume loss in the face of climate change Geography of Europe, Asia, Africa, Australia and the Polar Regions Frederick Kenneth Branom, Helen Marie Ganey, 1928

Senators' Perspectives on Global Warming United States. Congress. Senate. Committee on Environment and Public Works, 2007 *The World is Blue* Sylvia A. Earle, 2009 A Silent Spring for our era this eloquent urgent fascinating book reveals how just 50 years of swift and dangerous oceanic change threatens the very existence of life on Earth Legendary marine scientist Sylvia Earle portrays a planet teetering on the brink of irreversible environmental crisis In recent decades we ve learned more about the ocean than in all previous human history combined But even as our knowledge has exploded so too has our power to upset the delicate balance of this complex organism Modern overexploitation has driven many species to the verge of extinction from tiny but

indispensable biota to magnificent creatures like tuna swordfish and great whales Since the mid 20th century about half our coral reefs have died or suffered sharp decline hundreds of oxygen deprived dead zones blight our coastal waters and toxic pollutants afflict every level of the food chain Fortunately there is reason for hope but what we do or fail to do in the next ten years may well resonate for the next ten thousand The ultimate goal Earle argues passionately and persuasively is to find responsible renewable strategies that safeguard the natural systems that sustain us The first step is to understand and act upon the wise message of this accessible insightful and compelling book The Sun, Energy, and Climate Change Eklas Hossain,2023-01-01 The Sun Energy and Climate Change conveys one central idea that we can utilize energy without continuing to harm the planet by increasing our reliance on energy from the sun This accessible guide stresses the sun's importance as our ultimate energy source by focusing on climate change from an energy perspective and explains the naturally balanced energy transfer from the sun to the earth and society's consumption of this energy This book is for anyone worried about environmental damage from our reliance on fossil fuels and the global fight against climate change The key message being we do not have to accept the inevitable and can work to prevent the worst **Encyclopedia of Ocean Sciences** ,2019-04-12 The oceans cover 70% of the Earth's surface and are critical components of Earth's climate system This new edition of Encyclopedia of Ocean Sciences Six Volume Set summarizes the breadth of knowledge about them providing revised up to date entries as well coverage of new topics in the field New and expanded sections include microbial ecology high latitude systems and the cryosphere climate and climate change hydrothermal and cold seep systems The structure of the work provides a modern presentation of the field reflecting the input and different perspective of chemical physical and biological oceanography the specialized area of expertise of each of the three Editors in Chief In this framework maximum attention has been devoted to making this an organic and unified reference Represents a one stop organic information resource on the breadth of ocean science research Reflects the input and different perspective of chemical physical and biological oceanography the specialized area of expertise of each of the three Editors in Chief New and expanded sections include microbial ecology high latitude systems and climate change Provides scientifically reliable information at a foundational level making this work a resource for students as well as active researches
