Scientific and Technical Aerospace Reports ,1991 **Science and Technology in the Global Cold War** Naomi

Oreskes,John Krige,2014-10-31 Investigations of how the global Cold War shaped national scientific and technological practices in fields from biomedicine to rocket science The Cold War period saw a dramatic expansion of state funded science and technology research Government and military patronage shaped Cold War technoscientific practices imposing methods that were project oriented team based and subject to national security restrictions These changes affected not just the arms race and the space race but also research in agriculture biomedicine computer science ecology meteorology and other fields

This volume examines science and technology in the context of the Cold War considering whether the new institutions and institutional arrangements that emerged globally constrained technoscientific inquiry or offered greater opportunities for it. The contributors find that whatever the particular science and whatever the political system in which that science was operating the knowledge that was produced bore some relation to the goals of the nation state. These goals varied from nation to nation: weapons research was emphasized in the United States and the Soviet Union for example but in France and China scientific independence and self reliance dominated. The contributors also consider to what extent the changes to science and technology practices in this era were produced by the specific politics, anxieties and aspirations of the Cold War.

Racing for the Bomb Robert S. Norris, 2014-10-21

In September 1942 Colonel Leslie R Groves was given the job of building the atomic bomb. As a career officer in the Army Corps of Engineers Groves had overseen hundreds of military construction projects including the Pentagon. Until now scientists have received the credit for the Manhattan Project's remarkable achievements. And yet it was Leslie R Groves who made things happen. It was Groves who drove manufacturers, construction crews, scientists, industrialists and military and civilian officials to come up with the money, the materials and the plans to solve thousands of problems and build the bomb in only two years. It was his operation and in *Racing for the Bomb* he emerges as a take charge can do figure who succeeds in the face of formidable odds. Revealed for the first time in *Racing for the Bomb*, Groves played a crucial and decisive role in the planning, timing and targeting of the Hiroshima and Nagasaki missions. Norris offers new insights into the complex and controversial questions surrounding the decision to drop the bomb in Japan and Groves's actions during World War II which had a lasting imprint on the nuclear age and the Cold War that followed. Groves's extensive influence on key institutions of postwar America has been overlooked for too long. In this full scale biography which includes archival material and family letters and documents and features several previously unpublished photographs Norris places Groves at the center of the amazing Manhattan Project story. Skyhorse Publishing along with our Arcade, Good Books, Sports Publishing and Yucca imprints is proud to publish a broad range of biographies, autobiographies and memoirs. Our list includes biographies on well known historical figures like Benjamin Franklin, Nelson Mandela and Alexander Graham Bell as well as villains from history such as Heinrich Himmler, John Wayne Gacy and O J Simpson. We have also published survivor stories of World War II, memoirs about overcoming adversity, first hand tales of adventure and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.
