Genetic Resources as Natural Information Manuel Ruiz Muller, 2015-09-16 Demonstrating the shortcomings of current policy and legal approaches to access and benefit sharing ABS in the Convention on Biological Diversity CBD this book recognizes that

genetic resources are widely distributed across countries and that bilateral contracts undermine fairness and equity The book offers a practical and feasible regulatory alternative to ensure the goal of fairness and equity is effectively and efficiently met Through a legal analysis that also incorporates historic economic and sociological perspectives the book argues that genetic resources are not tangible resources but information It shows that the existing preference for bilateralism and contracts reflects resistance on the part of many of the stakeholders involved in the CBD process to recognize them as such ABS issues respond very well to the economics of information yet as the author explains these have been either sidelined or overlooked At a time when the Nagoya Protocol on ABS has renewed interest in feasible policy options the author provides a constructive and provocative critique The institutional policy and regulatory framework constitute bounded openness under which fairness and equity emerge

Put Y'all Back in Chains Horace Cooper, 2023-07-04 Put Y all Back in Chains outlines how the policies of President Joe Biden harm Black communities and limit opportunities for their success Whether you agree or disagree Horace Cooper's latest book tackles the question of how Joe Biden's policies affect Americans especially those in minority

and underserved communities His research shows that the injuries are calamitous Instead of a rising tide lifting all boats the Biden policies are having a reverse effect one that devastates bank accounts crushes entrepreneurship and steals the promise of the American Dream Horace painstakingly combs through the harsh results of these efforts especially on lower income and working class people who are hit hardest by the woke policies of Joe Biden If you want to see the real story the media isn't telling this book is a must read Sean Hannity Fox News Host A thorough examination of the ways that the policies of President Joe Biden are antithetical to the aspirations and dreams of Blacks Put Y'all Back in Chains uncovers the reasons that the policies of the Biden Administration hurt Black communities in particular And this is no accident Progressive policymakers relished Biden's COVID 19 pandemic restrictions his experiments with higher unemployment benefits and related regulatory programs and especially his push for the green agenda Consequently working class people especially Black men were hardest hit when it comes to finding employment as well as maintaining their financial lifestyle Tragically the Biden Agenda hurt the entire Black community affecting educational attainment wealth creation and homeownership These dramatic downward changes were particularly hard to absorb for Black households especially those that made tremendous gains during the Trump Administration It is increasingly clear that President Joe Biden's priorities place Blacks at the back of the political bus In this thoroughly researched book Horace Cooper outlines how the minority group most likely to support Biden Blacks are systematically impaired by this White House and why the Black community needs to turn away from the Biden Administration and toward a brighter future

A History of Scientific Journals Aileen Fyfe, Noah Moxham, Julie

McDougall-Waters, Camilla Mørk Røstvik, 2022-10-03 Modern scientific research has changed so much since Isaac Newton's day it is more professional collaborative and international with more complicated equipment and a more diverse community of researchers Yet the use of scientific journals to report share and store results is a thread that runs through the history of science from Newton's day to ours Scientific journals are now central to academic research and careers Their editorial and peer review processes act as a check on new claims and findings and researchers build their careers on the list of journal

articles they have published The journal that reported Newton's optical experiments still exists First published in 1665 and now fully digital the Philosophical Transactions has carried papers by Charles Darwin Dorothy Hodgkin and Stephen Hawking It is now one of eleven journals published by the Royal Society of London Unrivalled insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing The editorial management business practices and financial difficulties of the Philosophical Transactions and its sibling Proceedings reveal the meaning and purpose of journals in a changing scientific community At a time when we are surrounded by calls to reform the academic publishing system it has never been more urgent that we understand its history

The State of Conservation Joshua Nygren, 2025-01-06 In the twentieth century natural resource conservation emerged as a vital force in US politics laying the groundwork for present day sustainability Merging environmental agricultural and political history Joshua Nygren examines the political economy and ecology of agricultural conservation through the lens of the conservation industrial complex This evolving public private network which united the US Department of Agriculture Congress local and national organizations and the agricultural industry guided soil and water

conservation in rural America for much of the century Contrary to the classic tales of US environmental politics and the rise and fall of the New Deal Order this book emphasizes continuity Nygren demonstrates how the conservation policies programs and partnerships of the 1930s and 1940s persisted through the age of environmentalism and how their defining traits anticipated those typically associated with late twentieth century political culture The conservation industrial complex promoted a development oriented brand of conservation that aided the rise of large scale capital intensive agriculture which continues today It also reshaped the physical and political landscapes of the country leading to impressive conservation victories and spectacular failures by privileging some environments degrading others and intensifying farm depopulation In the name of environmental protection agricultural conservation made rural America less equal **Yearbook of**

Reluctant Conquest Kathryn C. Lavelle, 2025-06-10

A comprehensive history of U.S. involvement in the Arctic from the American Revolution through the acquisition of Alaska to the present day. What drives American foreign relations in the Arctic? It is difficult to give a unified answer to this question because most histories of the region are divided between the Atlantic and Pacific coasts, Asian and European strategic interests, or federal government and Indigenous peoples' concerns, making it difficult to understand the connections among the environmental challenges, scientific understandings, strategic calculations, and governance relationships. Most Americans do not think of their country as an Arctic power, yet it is a region where the United States has had important ties throughout its history. In this sweeping study from the founding of the country through the acquisition of Alaska to the present, Kathryn C. Lavelle considers American relations across the circumpolar North, incorporating discussions of economics, national security, and science that are conventionally separated. Lavelle argues that it is impossible to understand U.S. policy without a knowledge of American political development and of how scientific understandings have grown alongside studies of climate and other environmental issues. This history has important implications for future American policy regarding traditional national security and political economy, in addition to climate change and environmental cooperation.
