Guidelines for Design of Low Rise Buildings Subjected to Lateral Forces is a concise guide that identifies performance issues concerns and research needs associated with low rise buildings The book begins with an introduction that discusses special problems with low rise buildings subjected to wind and earthquakes Chapter 2 examines probabilistic methods and their use in evaluating risks from natural hazards It also addresses the characteristics of wind and seismic forces and levels of risk implied by building codes Wind forces are covered in more detail in Chapter 3 with discussions of wind force concepts and wind structure interactions Chapter 4 is devoted to earthquake forces and traces the development of building codes for earthquake resistant design Chapter 5 describes the main framing systems used to resist lateral forces and discusses the code requirements for drift control The designs and requirements for connections between building elements are addressed in Chapter 6 It includes examples along with several illustrations of suitable connections The performance of non structural elements during wind and earthquake forces is also examined in detail This book serves as an important reference for civil engineers construction engineers architects and anyone concerned with structural codes and standards It is an excellent guide that can be used to supplement design recommendations and provide a design basis where there are no current requirements *Exhibitions and the Development of Modern Planning Culture* Robert Freestone,Marco Amati,2016-12-05

The evolution of city planning theory and practice in the first half of the twentieth century was captured and driven by a range of exhibitionary practices in a variety of settings globally from international expos to local public halls The agendas of the promoters varied but exhibitions generally drew their social legitimacy from their status as appropriate educative agencies of citizenship Bringing together a range of international case studies this volume explores the highly visual genre of public planning exhibitions worldwide In doing so it provides a unique lens on the development of modern urban planning and design from the late 19th century to the present day Focussing mainly on the first half of the 20th century it looks in particular at historic exhibitions which sought to transform urban society s understanding of the possibilities of planning as a force for social betterment The visuality of presentation contemporary reactions and outcomes for the planning profession and the community are explored to make for a unique innovative and attractive approach to the history of planning ideas The five major themes are the visual representation of ideas and ideologies institutions and individuals involved the broader context of display and the impacts and implications for the development planning culture With contributors including Karl

Fischer John Gold Carola Hein Peter Larkham Javier Monclus and Mark Tewdwr Jones the dominant intellectual paradigm further unifying the collection is planning history Building Acoustics And Vibration: Theory And Practice Osama A B Hassan,2009-06-24 As a comprehensive reference dedicated to sound and vibration in buildings Building Acoustics and Vibration addresses the basic and advanced principles that can be used to solve practical and theoretical problems typically encountered in building and architectural acoustic practices In addition physical and mathematical concepts are introduced and developed sufficiently to make this publication a self contained and up to date source of information for readers Building Acoustics and Vibration is a must have textbook for engineering students engineers and consultants involved in the sound vibrations and building environment With comprehensibility and versatility in the presentation of knowledge this highly anticipated publication will easily fill the gap in the literature of building engineering and sciences which presently lacks an authoritative guide on the theoretical and practical aspects of building acoustics and vibration Journal of the Royal Institute of British Architects ,1928
