

**GRADE 10 PHYSICAL SCIENCES
NOVEMBER EXAMINATION PAPER 1: PHYSICS**

**SECTION A
QUESTION 1**

Various options are provided as possible answers to the following questions. Choose the correct answer and write **ONLY** the **LETTER** (A-D) next to the **QUESTION NUMBER** in your answer book.

1.1 Which of the following is an example of a vector?

- A time
- B speed
- C pressure
- D mass

1.2 What can be determined by calculating the gradient of a position vs time graph?

- A acceleration
- B displacement
- C velocity
- D none of the above

Use the circuit diagram below to answer QUESTIONS 1.3 and 1.4

1.3 The voltage over the parallel resistors will be:

- A 8V
- B 7V
- C 2V
- D 3V

1.4 The current in ONE parallel branch if the resistor offered a resistance of 0.5Ω

- A 1A
- B 4A
- C 1.5A
- D 3A

1.5 The equivalent unit for work is:

- A joule per coulomb
- B joule per second
- C joule per ampere
- D coulomb per second

1.6 Two waves moving in opposite directions collide with constructive interference. Wave A has an amplitude of 2 units and Wave B has an amplitude of 0.5 units. The combined wave has an amplitude of:

- A 1.5 units
- B 2 units
- C 2.5 units
- D 0.5 units

1.7 A ball with a mass of 2kg is released from a height of 20m and takes 1.2s to reach the ground. If the mass of the ball is increased to 8kg the time it takes to reach the ground will:

- A increase
- B Decrease
- C Remain the same

1.8 A glass rod and a cloth are rubbed against each other. The glass rod becomes positively charged. Which statement best describes the reason for this?

- A The glass rod gained protons from the cloth.
- B The cloth gained electrons from the glass rod.
- C The glass rod lost protons to the cloth.
- D The cloth lost electrons to the glass rod.

Memorandum Physical Science Paper Exemplar 23:

Chemical News and Journal of Physical Science, 1916 **The Secure and the Dispossessed** Nick Buxton, Ben Hayes, 2015-11-20 While the world's scientists and many of its inhabitants despair at the impact of climate change corporate and military leaders see nothing but opportunities For them melting ice caps mean newly accessible fossil fuels borders to be secured from climate refugees social conflicts to be managed and more failed states in which to intervene They are securing their assets at the expense of the planet and its inhabitants The Secure and the Dispossessed looks at these deadly approaches with a critical eye It also considers the flip side that the legitimacy of the elite is under unprecedented pressure from resistance by communities to resource grabs to those creating new ecological and socially just models for managing our energy food and water Topics covered include geoengineering militarism refugee protection greenwashing and the agricultural crisis among others Adaptation and resilience to a climate changed world is desperately needed but the form it will take will affect all of our futures *Linear Dynamical Systems on Hilbert Spaces: Typical Properties and Explicit Examples* S. Grivaux, É. Matheron, Q. Menet, 2021-06-21 We solve a number of questions pertaining to the dynamics of linear operators on Hilbert spaces sometimes by using Baire category arguments and sometimes by constructing explicit examples In particular we prove the following results i A typical hypercyclic operator is not topologically mixing has no eigen values and admits no non trivial invariant measure but is densely distributionally chaotic ii A typical upper triangular operator with coefficients of modulus 1 on the diagonal is ergodic in the Gaussian sense whereas a typical operator of the form diagonal with coefficients of modulus 1 on the diagonal plus backward unilateral weighted shift is ergodic but has only countably many unimodular eigenvalues in particular it is ergodic but not ergodic in the Gaussian sense iii There exist Hilbert space operators which are chaotic and U frequently hypercyclic but not frequently hypercyclic Hilbert space operators which are chaotic and frequently hypercyclic but not ergodic and Hilbert space operators which are chaotic and topologically mixing but not U frequently hypercyclic We complement our results by investigating the descriptive complexity of some natural classes of operators defined by dynamical properties *The Changing University* Dorothy Shore Zinberg, 1991-05-31 This collection of papers was written for a NATO Advanced Research Workshop held at Harvard University in March 1990 The title The Changing University and the Education of Scientists and Engineers An International Workshop broad as it is does not convey the sweep of data information opinions and suggestions for future research and policy choices that were crowded into two and a half days of formal presentations mealtime discussions and teatime chats The proposal for the workshop grew out of a research project I had carried out that explored the policies governing the education of foreign science and engineering students in several industrialized countries and of two countries that send large numbers of S E students abroad the People's Republic of China PRC and Japan see chapter 7 In research visits to these countries as well as to France the United Kingdom West Germany and within the United States I was struck by the similarity of issues that were raised One

was the concern that there would not be enough well trained scientists and engineers to meet the constantly increasing demand for them Government officials industrialists and educators repeatedly stressed that a well educated and motivated work force was essential for their economies national security and for society as a whole Many of those interviewed mentioned that universities are undergoing rapid systemic changes as governments and industry are calling on them to provide human resources and intellectual capital *Scientific and Technical Aerospace Reports* ,1992 Nuclear Science Abstracts ,1972 **Government Reports Announcements & Index** ,1993 Key-words-in-context Title Index ,1962

of Science ,1911 **China** World Bank,1993 The Republic of Korea s industrial policy has directed that nation s economy through nearly three decades of spectacular growth But the authors of this paper maintain that this policy is showing signs of being outmoded The time has come the authors argue for the Korean government to stop managing the economy s structural development and to redefine the responsibilities of business and government Under this proposed compact the allocation of resources would shift from the government to the private industrial and financial sectors The transformation of the government bureaucracy from an ad hoc policy role to one of a transparent and predictable regulator is a key to the success of this undertaking These new directions would present the government with enormous challenges Greater competitive discipline and regulatory oversight would be required While dealing with the complexities of the transition the government would have to maintain macroeconomic stability and the momentum of savings and investment For comparison the study examines the industrial economies of France Germany Japan and the United States which underwent similar shifts **Out of the Crystal Maze** Lillian Hoddeson,Ernst Braun,Jurgen Teichmann,Spencer Weart,1992-10-01 This landmark work chronicles the origin and evolution of solid state physics which grew to maturity between 1920 and 1960 The book examines the early roots of the field in industrial scientific and artistic efforts and traces them through the 1950s when many physicists around the world recognized themselves as members of a distinct subfield of physics research centered on solids The book opens with an account of scientific and social developments that preceded the discovery of quantum mechanics including the invention of new experimental means for studying solids and the establishment of the first industrial laboratories The authors set the stage for the modern era by detailing the formulation of the quantum field theory of solids The core of the book examines six major themes the band theory of solids the phenomenology of imperfect crystals the puzzle of the plastic properties of solids solved by the discovery of dislocations magnetism semiconductor physics and collective phenomena the context in which old puzzles such as superconductivity and superfluidity were finally solved All readers interested in the history of science will find this absorbing volume an essential resource for understanding the emergence of contemporary physics **Projecting Science and Engineering Personnel Requirements for the 1990s** United States.
