bound into these images we consciously experience ourselves as making judgments or arriving at decisions Thus one might hear oneself as judging in inner speech that it is time to go home for example However our amodal non sensory propositional attitudes are never actually among the contents of this stream of conscious reflection Our beliefs goals and decisions are only ever active in the background of consciousness working behind the scenes to select the sensory based imagery that occurs in working memory They are never themselves conscious Drawing on extensive knowledge of the scientific literature on working memory and related topics Carruthers builds an argument that challenges the central assumptions of many philosophers In addition to arguing that non sensory propositional attitudes are never conscious he also shows that they are never under direct intentional control Written with his usual clarity and directness The Centered Mind will be essential reading for all philosophers and cognitive scientists interested in the nature of human thought processes   **Memory and Pluralism in the Baltic States** Eva-Clarita Pettai,2014-06-11 Memories both in individual and collective form still have a significant impact on how people relate to political processes in Europe today While much has been written about top down attempts by states and political actors to mould people s memories of the past through public commemoration textbooks or monuments this volume takes a view from below by focusing on different types of societal actors and the ways in which they interact with the political world in order to influence collective memory Presented within a comprehensive conceptual framework the empirical cases focus on three countries of the former Soviet Union Estonia Latvia and Lithuania They show that different or even antagonistic perceptions of the recent past not only appear between different ethnic groups but also between socio economic groups different age groups or generations as well as between women and men Moreover they give an impressive account on the multiple ways in which these perceptions empower individuals and groups to seek greater influence in the construction of collective memory The volume therefore not only provides a valuable and fresh perspective on the relationship between social memory and democratic politics but also contributes to post Communist regional studies in the enlarged European Union This book was published as a special issue of the Journal of Baltic Studies   **Advanced Memory Technology** Ye Zhou,2023-10-09 Advanced memory technologies are impacting the information era representing a vibrant research area of huge interest in the electronics industry The demand for data storage computing performance and energy efficiency is increasing exponentially and will exceed the capabilities of current information technologies Alternatives to traditional silicon technology and novel memory principles are expected to meet the need of modern data intensive applications such as big data and artificial intelligence AI Functional materials or methodologies may find a key role in building novel high speed and low power consumption computing and data storage systems This book covers functional materials and devices in the data storage areas alongside electronic devices with new possibilities for future computing from neuromorphic next generation AI to in memory computing Summarizing different memory materials and devices to emphasize the future applications graduate students and researchers can systematically learn and understand the design

materials characteristics device operation principles specialized device applications and mechanisms of the latest reported memory materials and devices   *An American Theatre* Richard Somerset-Ward,Joanne Woodward,Paul Newman,2005-01-01 This fascinating book traces the entire story of Westport Country Playhouse from its beginnings in the midst of the Depression to its 75th anniversary renovations and rejuvenation Filled with colorful characters it is a story that will appeal to everyone who has ever been enchanted by live theatre   Performing Memory in Art and Popular Culture Liedeke Plate,Anneke Smelik,2013 This volume pursues a new line of research in cultural memory studies by understanding memory as a performative act in art and popular culture Here authors combine a methodological focus on memory as performance with a theoretical focus on art and popular culture as practices of remembrance The essays in the book thus analyze what is at stake in the complex processes of remembering and forgetting of recollecting and disremembering of amnesia and anamnesis that make up cultural memory
