#### Activity B:

#### Cranial capacity

Get the Gizmo ready:

- Select **Side view**.
- Turn off **Ruler**, and turn on **Click to measure area**.

**Introduction:** The brain is housed inside the cranium. The internal volume of the cranium is called the **cranial capacity**. The larger an organism's cranial capacity is, the larger its brain tends to be.

**Question:** How does the cranial capacity compare amongst hominids?

1. **Measuring:** To estimate the cranial capacity of each skull in the Gizmo, measure the area of the part of the cranium that houses the brain. This part of the cranium is roughly behind the red line in the diagram at right. You can also use the three skull images below as a guide for measuring the rest of the skulls in the Gizmo.

After you measure the area of each cranium, multiply the result by 5. This will give you a very rough estimate of the species' cranial capacity.

*Homo sapiens*

*Pan troglodytes*

*Australopithecus afarensis*

| Species                | Area of cranium (cm <sup>2</sup> ) | Estimated cranial capacity (cm <sup>3</sup> ) |
|------------------------|------------------------------------|---|
| <i>Pan troglodytes</i> | 87                                 | 435   |
| <i>A. afarensis</i>    | 78                                 | 390   |

Coolidge, Thomas Grant Wynn, 2009-04-13 The Rise of Homo Sapiens The Evolution of Human Thinking presents a provocative theory about the evolution of the modern mind based on archaeological evidence and the working memory model of experimental psychologist Alan Baddeley The book explains the mystery of the disappearance of the Neandertals and the ascendancy of modern *Homo sapiens* and whether this was at the expense of the Neandertals The Rise of Homo Sapiens has been written to introduce scientists and students to the fascinating interface between the worlds of archaeology and cognitive science and argues that the evolution of modern thinking occurred in two major leaps the advent of *Homo erectus* over 1.5 million years ago and a final enhancement of working memory capacity sometime within the last 200 000 years The authors argue that highly ritualized burials personal ornaments cave art and highly creative figurines and age and gender divisions of economic labor all of which were characteristic of *Homo sapiens* about 30 000 years ago were clearly products of their cognitive functions e g central executive functions Neandertals living at the same time had virtually none of these cultural products despite larger brains This is the first book to explain elaborately how thinking differences between *Homo sapiens* and Neandertals may have accounted for the ultimate demise of Neandertals Cognitive archaeology is a quickly growing discipline yet archaeologists have been slow to adopt current theories models and findings within contemporary cognitive science The Rise of Homo Sapiens will serve as a unique introduction and primer into both disciplines **What Does it Mean to be Human?** Richard Potts, Christopher Sloan, 2010 This generously illustrated book tells the story of the human family showing how our species physical traits and behaviors evolved over millions of years as our ancestors adapted to dramatic environmental changes In What Does It Means to Be Human Rick Potts director of the Smithsonian s Human Origins Program and Chris Sloan National Geographic s paleoanthropology expert delve into our distant past to explain when why and

how we acquired the unique biological and cultural qualities that govern our most fundamental connections and interactions with other people and with the natural world Drawing on the latest research they conclude that we are the last survivors of a once diverse family tree and that our evolution was shaped by one of the most unstable eras in Earth s environmental history The book presents a wealth of attractive new material especially developed for the Hall s displays from life like reconstructions of our ancestors sculpted by the acclaimed John Gurche to photographs from National Geographic and Smithsonian archives along with informative graphics and illustrations In coordination with the exhibit opening the PBS program NOVA will present a related three part television series and the museum will launch a website expected to draw 40 million visitors
