Question: How is energy changed from one form to another?

1. Classify: **Energy** is the ability to exert force and cause change. Energy has many forms:

- **Kinetic energy** is energy of motion. All moving things have kinetic energy.
 - **Sound** is energy of vibrating materials or air molecules.
 - **Thermal energy** is the energy of tiny moving particles. As an object heats up, particles move faster and thermal energy increases.
- **Gravitational potential energy** is stored energy that exists based on the position of an object. The higher an object is, the greater its gravitational potential energy.
- **Electrical current** is energy that comes from moving charged particles.
- **Light** is electromagnetic waves that are visible to the eye.
- **Chemical energy** is energy that is stored in the bonds holding atoms together.
- **Nuclear energy** is energy released when atoms split apart or join together.

2. Create path: Create an energy path in the Gizmo, starting at the **Sun**. For each step of the path, describe the energy conversion that takes place. The first one is done for you. Discuss your answers with your classmates and teacher.
