

Student Exploration: Mineral Identification

Vocabulary: crystal, density, hardness, homogeneous, luster, mass, mineral, streak, volume

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Suppose you find a yellow piece of metal in a stream. How could you tell if it is real gold?

Gold is typically very heavy for its size. If it sinks to the bottom of the stream, it should be real gold.

2. In the city a street peddler offers to sell you a diamond ring for thirty bucks. How could you test if the rock in the ring is a real diamond?

Since diamond is the hardest naturally occurring substance, you could test if you can scratch it. It isn't real.

Gizmo Warm-up: Determining density

A **mineral** is a naturally formed crystal. You can identify a mineral by its properties. In the *Mineral Identification* Gizmo, under **Choose property to test**, select **Density**.

1. **Mass** is the amount of substance in an object. Drag the mineral sample onto the balance.

What is the mass of the mineral? 24.9 g
(Units are grams, g.)

2. **Volume** is the amount of space an object takes up. The volume is measured by how much the water rises in a graduated cylinder. Drag the mineral into the cylinder.

What is the volume of the mineral? 12 mL (Units are milliliters, or mL.)

3. **Density** is a measure of how "light" or "heavy" an object is for its size. To find the density of an object, divide the mass by the volume. (Calculators are recommended.)

What is the density of the mineral? 2.08 g/mL (Units are grams per milliliter, g/mL.)
