widely marketed as a service is analysed in depth explaining the main characteristics of the transport operation its market and the regulatory context The main actors the professional actors carriers shippers and other agents and the public authorities are introduced and their behaviour and interactions are clarified This comprehensive approach allows the reader to go further and consider in particular the approaches and practices of transport by carriers customers logistics managers political decision makers and citizens to tackle long range issues such as the decoupling of production and transport recommended by some institutions and experts and to explore the need for more infrastructure or the capacity of the freight transport industry to reduce its contribution to pollution and climate change This book treats freight transport as a whole system in its technical economic social political and environmental context in contrast to existing transport literature focused on individual aspects such as transportation planning usually for cars or passengers logistics essentially management issues or individual transport modes This book is comprehensive in its treatment of freight transport and in its use of multiple disciplinary perspectives
