Lipis,2013-02-13 □□□□□□ ,2007 *Logic and Philosophy of Science in Uppsala* D. Prawitz,Dag Westerståhl,2013-06-29 The International Congresses of Logic Methodology and Philosophy of Science which are held every fourth year give a cross section of ongoing research in logic and philosophy of science Both the invited lectures and the many contributed papers are conducive to this end At the 9th Congress held in

Uppsala in 1991 there were 54 invited lectures and around 650 contributed papers divided into 15 different sections. Some of the speakers who presented contributed papers that attracted special interest were invited to submit their papers for publication and the result is the present volume. A few papers appear here more or less as they were presented at the Congress whereas others are expansions or elaborations of the talks given at the Congress. A selection of this kind containing 38 papers drawn from the 650 contributed papers presented at the Uppsala Congress cannot do justice to all facets of the field as it appeared at the Congress. But it should allow the reader to get a representative survey of contemporary research in large areas of philosophical logic and philosophy of science. About half of the papers of the volume appear in sections listed at the Congress under the heading Philosophical and Foundational Problems about the Sciences. The section Foundations of Logic, Mathematics and Computer Science is represented by three papers. Foundations of Physical Sciences by six papers. Foundations of Biological Sciences by three papers. Foundations of Cognitive Science and AI by one paper and Foundations of Linguistics by three papers.

The Oxford Handbook of The History of Analytic Philosophy Michael

Beaney, 2013-06-20. During the course of the twentieth century analytic philosophy developed into the dominant philosophical tradition in the English speaking world. In the last two decades it has become increasingly influential in the rest of the world from continental Europe to Latin America and Asia. At the same time there has been deepening interest in the origins and history of analytic philosophy as analytic philosophers examine the foundations of their tradition and question many of the assumptions of their predecessors. This has led to greater historical self-consciousness among analytic philosophers and more scholarly work on the historical contexts in which analytic philosophy developed. This historical turn in analytic philosophy has been gathering pace since the 1990s and the present volume is the most comprehensive collection of essays to date on the history of analytic philosophy. It contains state of the art contributions from many of the leading scholars in the field, all of the contributions specially commissioned. The introductory essays discuss the nature and historiography of analytic philosophy accompanied by a detailed chronology and bibliography. Part One elucidates the origins of analytic philosophy with special emphasis on the work of Frege, Russell, Moore and Wittgenstein. Part Two explains the development of analytic philosophy from Oxford realism and logical positivism to the most recent work in analytic philosophy and includes essays on ethics, aesthetics and political philosophy as well as on the areas usually seen as central to analytic philosophy such as philosophy of language and mind. Part Three explores certain key themes in the history of analytic philosophy.
