Cobb, 2023-01-03 A Simon Schuster eBook Simon Schuster has a great book for every reader **Nutrition for Developing Countries** Felicity Savage King, Ann Burgess, Victoria J. Quinn, Akoto K. Osei, 2015-10-15 Nutrition is an essential component of the work of all health and community workers including those involved in humanitarian assistance and yet it is often neglected in their basic training Drawn from the experiences of an international editor team with extensive field experience Nutrition for Developing Countries brings together the essential basics of nutrition in an easily accessible form which is accurate up to date and practical and suitable for a wide range of readers at different levels The book covers the whole life cycle including pregnancy breastfeeding complementary feeding older children adolescents adults and the elderly with an emphasis on the most vulnerable women and children The fully revised and updated edition addresses both the long standing problems of undernutrition and malnutrition and the growing epidemic of overnutrition and obesity which are responsible for the rapid increase in non communicable diseases of later life Generously illustrated Nutrition for Developing Countries explains in clear simple language and practical detail how nutrition workers can help families with nutrition problems including many ideas for exercises for training nutrition workers When Healthcare Hurts Greg Seager, 2012

Empowerment or Disempowerment There are three paths to take when designing and implementing global health initiatives One leads to the community one leads to the health system and the last leads to the community through the local health system Working at the community level is more complex and it should be considered only by programs that are experienced in doing so or in partnership with programs that have that experience Unfortunately this is where most short term programs choose to partner and this leads to many challenges Working in and through local health systems is the best way to eliminate most of these challenges Working at the health system and hospital level eliminates most of the patient safety issues associated with short term health initiatives It also pairs programs that understand each other together Thinking about

community level global health initiatives is often completely foreign to most western medical programs We term these community based programs horizontal because they arise from the community for the community Hospital systems are programs that are vertical in nature and western medical thinking is typically very vertical We will look at the idea of both vertical and horizontal models in this chapter so that you can clearly identify the best fit for your global health initiatives It is essential that we realize that using strictly vertical approaches to healthcare delivery in resource poor communities can be more harmful than helpful This is especially true if those projects are separated from local healthcare professionals and their services In many cultures everything western is better sought after and to be imitated while old ways of tradition and caring should be left behind and abandoned Alma Ata which we will discuss later in this chapter gave rise to the idea of horizontal community based programs That thinking has matured into sustainable models of healthcare and disease prevention If your program plans to function outside hospitals in the community then you need to invest time in learning how to design and implement horizontal community based programs If we do not learn respect and implement these methods we may be destined to leave a legacy of disempowerment and dependence on methods of healthcare that have proven ineffective in resource poor communities The opposite side to this is that if we do learn these methods there is no limit to the effect the enormous volume of short term volunteer teams could have on child mortality maternal mortality HIV AIDS malaria and other communicable diseases As healthcare providers trained in developed countries we need to let go of the idea that our methods of healthcare are the only methods There are methods short term teams can use to serve and support such projects we review some of these methods in this chapter
