During the last few years industrial fermentation technologies have advanced in order to improve the quality of the final product Some examples of those modern technologies are the biotechnology developments of microbial materials such as *Saccharomyces* and non *Saccharomyces* yeasts or lactic bacteria from different genera Other technologies are related to the use of additives and adjuvants such as nutrients enzymes fining agents or preservatives and their management which directly influence the quality and reduce the risks in final fermentation products Other technologies are based on the management of thermal treatments filtrations pressure applications ultrasounds UV and so on which have also led to improvements in fermentation quality in recent years The aim of the issue is to study new technologies able to improve the quality parameters of fermentation products such as aroma color turbidity acidity or any other parameters related to improving sensory perception by the consumers Food safety parameters are also included Natural Polymers and Biopolymers II Sylvain

Caillol, 2021-05-05 BioPolymers could be either natural polymers polymer naturally occurring in Nature such as cellulose or starch or biobased polymers that are artificially synthesized from natural resources Since the late 1990s the polymer industry has faced two serious problems global warming and anticipation of limitation to the access to fossil resources One solution consists in the use of sustainable resources instead of fossil based resources Hence biomass feedstocks are a promising

resource and biopolymers are one of the most dynamic polymer area. Additionally, biodegradability is a special functionality conferred to a material bio based or not. Very recently, facing the awareness of the volumes of plastic wastes, biodegradable polymers are gaining increasing attention from the market and industrial community. This special issue of *Molecules* deals with the current scientific and industrial challenges of Natural and Biobased Polymers through the access of new biobased monomers, improved thermo mechanical properties and by substitution of harmful substances. This themed issue can be considered as collection of highlights within the field of Natural Polymers and Biobased Polymers which clearly demonstrate the increased interest in this field. We hope that this will inspire researchers to further develop this area and thus contribute to a future more sustainable society.

Biogenic Amines and Food Safety Maria Martuscelli, Dino Mastrocola, 2021-08-31

Biogenic amines are bioactive compounds distributed in foods of all origins. Apart from their fundamental role in many bodily functions, there has recently been great interest in their toxicological potential. Much research is being carried out to understand their occurrence related to both desired and undesired fermentative phenomena, chemical spoilage, low hygienic conditions, wrong handling and criticism about technological factors of process and storage conditions. All these causes can contribute to a higher content of biogenic amines in food, particularly of those hazardous to human health. This book aims to collect scientific studies looking for new tools to limit the over production of biogenic amines in food, search for new food sources of biogenic amines and to spotlight the concept of safe food and bioactive amines content.

Modern Proteomics – Sample Preparation, Analysis and Practical Applications Hamid Mirzaei, Martin Carrasco, 2016-12-14 This volume serves as a proteomics reference manual describing experimental design and execution The book also shows a large number of examples as to what can be achieved using proteomics techniques As a relatively young area of scientific research the breadth and depth of the current state of the art in proteomics might not be obvious to all potential users There are various books and review articles that cover certain aspects of proteomics but they often lack technical details Subject specific literature also lacks the broad overviews that are needed to design an experiment in which all steps are compatible and coherent The objective of this book was to create a proteomics manual to provide scientists who are not experts in the field with an overview of

- 1 The types of samples can be analyzed by mass spectrometry for proteomics analysis
- 2 Ways to convert biological or ecological samples to analytes ready for mass spectral analysis
- 3 Ways to reduce the complexity of the proteome to achieve better coverage of the constituent proteins
- 4 How various mass spectrometers work and different ways they can be used for proteomics analysis
- 5 The various platforms that are available for proteomics data analysis
- 6 The various applications of proteomics technologies in biological and medical sciences

This book should appeal to anyone with an interest in proteomics technologies proteomics related bioinformatics and proteomics data generation and interpretation With the broad setup and chapters written by experts in the field there is information that is valuable for students as well as for researchers who are looking for a hands on
