**Out of Eden: The Peopling of the World** Stephen Oppenheimer, 2012-03-01 In a brilliant synthesis of genetic archaeological linguistic and climatic data Oppenheimer challenges current thinking with his claim that there was only one successful migration out of Africa In 1988 Newsweek headlined the startling discovery that everyone alive on the earth today can trace their maternal DNA back to one woman who lived in Africa 150 000 years ago It was thought that modern humans populated the world through a series of migratory waves from their African homeland Now an even more radical view has emerged that the members of just one group are the ancestors of all non Africans now alive and that this group crossed the mouth of the Red Sea a mere 85 000 years ago It means that not only is every person on the planet descended from one African Eve but every non African is related to a more recent Eve from that original migratory group This is a revolutionary new theory about our origins that is both scholarly and entertaining a remarkable account of the kinship of all humans Further details of the findings in this book are presented at [www.bradshawfoundation.com/stephenoppenheimer](http://www.bradshawfoundation.com/stephenoppenheimer)
