In this section of Newer Scientist in the heading of Human Evolution we'll be covering the entire basis on the Human evolution and simplifying it down to an accurate and easier way to understand explanation of the Human Evolution.

I'm going to start this section off with what the term evolution means. There can be different types of definitions for evolution but the one definition, which is necessary for what we are talking about, is 'Biological evolution'. Biological evolution is defined as many or any genetic changes to a population that is inherited over several generations or over the course of their life span. A lot of these changes may have a small impact or a large impact; they may or may not be noticeable through the course of life. But whatever the change is it will be classed as an evolution of some sort.

Many people will ask "How do we know that these evolution changed the population over the course of life or

what if they have been the same as we see them today" Well a way of knowing whether a species has evolved into what it is now, is by looking at the fossils. Fossils will provide lots of information about the organism that used to inhabit the earth in the past. So when the organism dies, the weather usually destroys the body. But on other occasions the body will be covered by mud that will harden over time or it will be incased by ice, which will protect the body of the organism. When scientists come to dig up the fossils of the organism the scientist will compare the organism from the past to the futures organisms and they will identify the Evolutionary changes.

ill be moving onto these pretty really interesting section of the human evolution, we will

*Evolutionary History of the Robust Australopithecines* Frederick E. Grine, 2017-09-29 In paleoanthropology the group of hominids known as the robust australopithecines has emerged as one of the most interesting Through them we have the opportunity to examine the origin natural history and ultimate extinction of not just a single species but of an entire branch in the hominid fossil record It is generally agreed that the human lineage can be traced back to this group of comparatively small brained large toothed creatures This volume focuses on the evolutionary history of these early hominids with state of the art contributions by leading international authorities in the field Although a case can be made for a robust lineage the functional and taxonomic implications of the morphological features are subject to vigorous disagreement An area of lively debate is the possible causal relationship between the presence of early Homo and the origin evolution and virtual extinction of robust australopithecines This volume summarizes what has been learned about the evolutionary history of the robust australopithecines in the 50 years since Robert Broom first encountered the visage of a new kind of ape man from Kromdraai New discoveries from Kromdraai to Lomekwi have served to keep us aware that the paleontological record for hominid evolution is hardly exhausted Because of such finds no single volume can hope to stand as a summary on the robust australopithecines for very long but this classic volume comes close to achieving this goal The book sheds new light upon some old questions and also acts to provide new

questions The answers to those questions bring us closer to a fuller understanding and appreciation of the origins evolution and ultimate demise of the robust australopithecines Since the robust australopithecines most likely stand as our closest relatives a better understanding of their origin history and demise serves to provide heightened appreciation of the course of human evolution itself This definitive volume addresses the questions and problems surrounding this important lineage

Advances in our ability to analyse information from skeletal remains and subsequent developments in the field of forensic anthropology make it possible to identify more victims of homicides mass fatality disasters and genocide Summarizing the vast collection of international literature that has developed over the past decade this volume explores critical themes fundamental to this evolving discipline Topics discussed include age determination in juveniles and adults sex race and ancestry determination stature determination dental and facial identification skeletal trauma and bone pathology taphonomy and comparative osteology and identification from soft tissues      *Artifacts and Ideas* Bruce Trigger,2017-09-08 Prehistoric archaeologists cannot observe their human subjects nor can they directly access their subjects ideas Both must be inferred from the remnants of the material objects they made and used In recent decades this incontrovertible fact has encouraged partisan approaches to the history and method of archaeology An empirical discipline emphasizing data classification and chronology has given way to a behaviorist approach that interprets finds as products of ecologically adaptive strategies and to a postmodern alternative that relies on an idealist cultural relativist epistemology based on belief and cultural traditions In *Artifacts and Ideas* Bruce G Trigger challenges all partisan versions of recent developments in archaeology while remaining committed to understanding the past from a social science perspective Over 30 years Trigger has addressed fundamental epistemological issues and opposed the influence of narrow theoretical and ideological commitments on archaeological interpretation since the 1960s Trigger encourages a relativistic understanding of archaeological interpretation Yet as post processual archaeology influenced by postmodernism became increasingly influential Trigger countered nihilistic

subjectivism by laying greater emphasis on how in the long run the constraints of evidence could be expected to produce a more comprehensive and objective understanding of the past In recent years Trigger has argued that while all human behavior is culturally mediated the capacity for such mediation has evolved as a flexible and highly efficient means by which humans adapt to a world that exists independently of their will Trigger agrees that a complete understanding of what has shaped the archaeological record requires knowledge both of past beliefs and of human behavior He knows also that one must understand humans as organisms with biologically grounded drives emotions and means of understanding Likewise even in the absence of data supplied in a linguistic format by texts and oral traditions at least some of the more ecologically adaptive forms of human behavior and some general patterns of belief that display cross cultural uniformity will be susceptible to archaeological analysis Advocating a realist epistemology and a materialist ontology Artifacts and Ideas offers an illuminating guide to the present state of the discipline as well as to how archaeology can best achieve its goals **21st Century Anthropology: A Reference Handbook** H.
