MEASUREMENT, EVALUATION AND ASSESSMENT IN EDUCATION RADHA MOHAN,2016-06-10 Assessment and evaluation are central to the educational system of a country as they impact the national policy of education besides helping in framing future strategies for growth of the nation The process of measurement evaluation and assessment is interlinked with curriculum and teaching learning methods enabling learning outcomes to be determined Good quality assessment is instrumental in determining a student s future goal and career path besides impacting all stakeholders of the school system

An effective school system cannot be built where the students are examined on the basis of mere paper and pencil tests. Today schools have access to the use of a range of techniques for student's assessment, teacher performance, school's effectiveness and the evaluation of the school system as a whole. The aim of the book is to provide an in-depth knowledge and understanding of measurement, evaluation and statistics in education both from theoretical and practical aspects. It also offers a concise step-by-step guide that helps in making assessment simple and economical in terms of money and time, besides being a boon for any institution. The book contains effective strategies to facilitate enhanced learning by explaining the interpretation of test scores. It has several illustrative examples drawn from the author's experience. Portfolios are proving to be a great way of assessment and how to incorporate them in the teaching-learning process is dealt with in detail. Instructions for constructing rubrics for evaluation of different domains of learning, i.e. cognitive, psychomotor and affective, have also been included in the book. Item analysis, basic statistics and different types of tests are discussed elaborately.

The Underwater Handbook Charles Shilling, 2013-11-11. This handbook attempts to translate data on various parameters of man's capability in underwater and hyperbaric environments for those without a background in the life sciences. Accomplishing any multifaceted task requires team work and effective team work depends on facile communication among all participants. To communicate properly, all parties must understand each other's problems and be able to speak a similar language. To this end, we believe that this publication will go a long way in furthering the understanding and communication necessary for maximum achievement. The U.S. Navy has a fundamental interest in all types of activities connected with the ocean and is especially interested in the growing field of manned underwater and hyperbaric activities. Thus the manuscript for this comprehensive book was developed under Office of Naval Research contract N00014-67-A-0214-0013 with The George Washington University. We acknowledge with appreciation the financial support and technical guidance for this undertaking by the Naval Medical Research and Development Command of the Bureau of Medicine and Surgery as well as by the Engineering Psychology Program and the Physiology Program of the Office of Naval Research. JOSEPH P. POLLARD, Director, Biological and Medical Sciences Division, Office of Naval Research. vii. Preface. A need was felt for a book that would document the relationship of the human being to the underwater hyperbaric environment in such a way that the individual unfamiliar with the psychological or biomedical jargon could still understand and appreciate the information.
