Algebraic Geometry and Commutative Algebra Hiroaki Hijikata, Heisuke Hironaka, Masaki Maruyama, 2014-05-10
Algebraic Geometry and Commutative Algebra in Honor of Masayoshi Nagata presents a collection of papers on algebraic geometry and commutative algebra in honor of Masayoshi Nagata for his significant contributions to commutative algebra. Topics covered range from power series rings and rings of invariants of finite linear groups to the convolution algebra of distributions on totally disconnected locally compact groups. The discussion begins with a description of several formulas for enumerating certain types of objects which may be tabular arrangements of integers called Young tableaux or some types of monomials. The next chapter explains how to establish these enumerative formulas with emphasis on the role played by transformations of determinantal polynomials and recurrence relations satisfied by them. The book then turns to several applications of the enumerative formulas and universal identity including enumerative proofs of the straightening law of Doubilet, Rota, Stein, and computations of Hilbert functions of polynomial ideals of certain determinantal loci. Invariant differentials and quaternion extensions are also examined along with the moduli of Todorov surfaces and the classification problem of embedded lines in characteristic p . This monograph will be a useful resource for practitioners and researchers in algebra and geometry.

Admissible Solutions of Hyperbolic Conservation Laws Tai-Ping Liu, 1981
We consider a system of n conservation laws $\partial_t u + \partial_x f(u) = 0$. The system is assumed to be strictly hyperbolic but not necessarily genuinely nonlinear in the sense of Peter Lax. Hyperbolic systems of conservation laws. 1957. Our purpose is to study the regularity, large time behavior, and the approximation of the solution of the initial value problem. Our analysis is based on the random choice method using the solution of the Riemann problem as building blocks.

Algebraic Geometry Michael Artin, 2022-09-20
This book is an introduction to the geometry of complex algebraic varieties. It is intended for students who have learned algebra analysis and topology as taught in standard undergraduate courses. So it is a suitable text for a beginning graduate course or an advanced undergraduate course. The book begins with a study of plane algebraic curves, then introduces affine and projective varieties, going on to dimension and constructibility. $\mathcal{O}_X$ modules, quasicoherent sheaves are defined without reference to sheaf theory, and their cohomology is defined axiomatically. The Riemann-Roch Theorem for curves is proved using projection to the projective line. Some of the points that aren't always treated in beginning courses are Hensel's Lemma, Chevalley's Finiteness Theorem, and the Birkhoff-Grothendieck Theorem. The book contains extensive discussions of finite group actions on $\mathbb{P}^3$ and double planes, and it ends with applications of the Riemann-Roch Theorem.

Exposition by Emil Artin: A Selection Emil Artin, 2007
Emil Artin was one of the great mathematicians of the twentieth century. He had the rare distinction of having solved two of the famous problems posed by David Hilbert in 1900. He showed

that every positive definite rational function of several variables was a sum of squares He also discovered and proved the Artin reciprocity law the culmination of over a century and a half of progress in algebraic number theory Artin had a great influence on the development of mathematics in his time both by means of his many contributions to research and by the high level and excellence of his teaching and expository writing In this volume we gather together in one place a selection of his writings wherein the reader can learn some beautiful mathematics as seen through the eyes of a true master The volume s Introduction provides a short biographical sketch of Emil Artin followed by an introduction to the books and papers included in the volume The reader will first find three of Artin s short books titled The Gamma Function Galois Theory and Theory of Algebraic Numbers respectively These are followed by papers on algebra algebraic number theory real fields braid groups and complex and functional analysis The three papers on real fields have been translated into English for the first time The flavor of these works is best captured by the following quote of Richard Brauer There are a number of books and sets of lecture notes by Emil Artin Each of them presents a novel approach There are always new ideas and new results It was a compulsion for him to present each argument in its purest form to replace computation by conceptual arguments to strip the theory of unnecessary ballast What was the decisive point for him was to show the beauty of the subject to the reader Information for our distributors Copublished with the London Mathematical Society beginning with Volume 4 Members of the LMS may order directly from the AMS at the AMS member price The LMS is registered with the Charity Commissioners

Certain Number-Theoretic Episodes In Algebra, Second Edition R Sivaramakrishnan, 2019-03-19 The book attempts to point out the interconnections between number theory and algebra with a view to making a student understand certain basic concepts in the two areas forming the subject matter of the book

(m)KdV Solitons on the Background of Quasi-Periodic Finite-Gap Solutions Fritz Gesztesy, Roman Svirsky, 1995 In the introductory section we review the formulation of the Korteweg de Vries KdV equation and of the modified KdV mKdV equation as a compatibility condition for a Lax pair of linear operators We then illustrate Miura s transformation which maps solutions of the mKdV into solutions of the KdV We then give a general overview of the concept of soliton solutions relative to general backgrounds and of the single and double commutation methods Finally we present the main results of the article To avoid the clutter of too many technical details the paper is organized in four sections and five appendices

Zhang, 2024-05-30 This volume contains the proceedings of the conference Recent Advances and New Directions in the Interplay of Noncommutative Algebra and Geometry held from June 20-24, 2022 at the University of Washington Seattle in honor of S. Paul Smith's 65th birthday. The articles reflect the wide interests of Smith and provide researchers and graduate students with an indispensable overview of topics of current interest. Specific fields covered include noncommutative algebraic geometry, representation theory, Hopf algebras and quantum groups, the elliptic algebras of Feigin and Odesskii, Calabi-Yau algebras, Artin-Schelter regular algebras, deformation theory, and Lie theory.
