NABH -

Common Critical Non-Conformities in Indian Hospitals Akash Tiwari, 2025-07-21 The NABH 6th Edition effective January 2025 represents a pivotal update to India's hospital accreditation standards aiming to advance patient safety, operational efficiency and overall healthcare quality. The 6th Edition reduces total Objective Elements (OEs) from 651 to 639 but raises Core OEs to 105, indicating a sharper focus on essential patient safety aspects. Compliance language now uses 'shall' instead of 'should', making previously recommended practices mandatory, increasing hospital accountability and the regulatory weight of each requirement.

Newly introduced standards include Promotive Preventive Health, which expands hospitals' focus to wellness, education and disease prevention, and Sustainability in Healthcare, obliging hospitals to adopt eco-friendly practices like robust waste management and energy conservation. These new areas demand significant investment in policy making, training and infrastructure, presenting particular challenges since most hospitals lack existing frameworks in these domains.

Critical updates strengthen demands for transfusion, obstetric services, hospital security and cybersecurity, requiring alignment with Ministry of Health and international benchmarks. The renaming of Hospital Infection Control to Infection Prevention Control underlines a proactive strategy against healthcare-associated infections (HAIs).

Historical NABH audits reveal that documentation errors account for about 70% of non-conformities, underscoring a deep, ongoing compliance problem. Common non-conformity areas, prioritized by impact and frequency, include:

- Information Management System (IMS):** Persistent documentation lapses and digital health cybersecurity deficiencies. Non-compliance can compromise patient safety, data privacy and organizational reputation due to legal risks or regulatory penalties. Solutions include standardized digital protocols, robust EHR adoption and continuous staff training.
- Human Resource Management (HRM):** Insufficient staff training, high attrition, clinician inertia and credentialing gaps limit care quality and safety. Addressing this requires competency-based training, strong leadership support and strict credentialing processes.
- Facility Management Safety (FMS):** Infrastructure neglect, emergency unpreparedness and poor biomedical waste handling threaten patient and staff safety. Regular audits, mandatory drills and systematic maintenance are crucial remedies.
- Infection Prevention Control (IPC):** Inconsistent adherence to hygiene, sterilization and waste segregation fosters HAIs and antimicrobial resistance. Enforced protocols and continuous training are essential for safety and quality.
- Care of Patients (COP):** Non-adherence to clinical nursing protocols and safe procedure lapses continue to risk patient well-being. Implementing evidence-based SOPs, rigorous audits and regular competency assessments is critical.
- Access, Assessment and Continuity of Care (AAC):** Workflow problems, especially delayed or missing assessments and unclear transfer protocols, lead to treatment delays and patient dissatisfaction. Standardized forms and robust handover mechanisms can mitigate these issues.
- Patient Rights Education (PRE):** Failures in patient education, consent and feedback collection erode trust and generate compliance lapses. Hospitals must ensure multilingual rights display, robust informed consent, grievance redressal and privacy protection.
- Structural issues:** Such as weak quality culture, resource constraints, inadequate training and outdated SOPs undermine compliance initiatives.

NABH 6th Edition sets higher

standards for patient care digital adoption and ecological responsibility Hospitals must establish robust documentation
continuous training and leadership driven quality improvement as ongoing priorities to achieve and sustain accreditation1
