Integrated Water Resources Management in Water-scarce Regions

The research project CuveWaters developed and implemented adapted technologies and accompanying measures to support the national process towards an Integrated Water Resources Management (IWRM). The aim is to give people in the Cuvelai-Etoshia Basin reliable access to clean water over the long term, thus enhancing their livelihood and health, and to create job opportunities. IWRM relies on solutions that use various sources, types and qualities of water for different purposes. CuveWaters implemented pilot plants for rain- and floodwater harvesting, groundwater desalination, as well as facilities for sanitation and water reuse. Technical components of the project were framed by societal and scientific components. Integrated Water Resources Management in Water-scarce Regions provides a comprehensive view on the complexity and interconnectedness of findings and conclusions regarding the principle strategic approach within the CuveWaters project's concept. The book aims to present the work of technical, social and natural scientists but also of media professionals: It gives thematically focussed details on the three technology-based solutions which go beyond mere technical considerations and embed this into the overarching process towards IWRM in Namibia. Finally, it critically addresses lessons learnt and limits of projects in the context of research for implementation. This book is of great value to experts, professionals and also students and academics in the areas of water management, technology development and implementation and transdisciplinary science.

Shaping the African Savannah

A history of 150 years of social-ecological transformations in the arid savannah landscape of Namibia.

Environmental Awareness for Sustainable Development

Water is essential for all aspects of life. Managing water is a challenging task, particularly in shared water basins that host more than half of the world's population. National sovereignty and security considerations have long constrained the reasonable, equitable and sustainable utilization of international water courses. With post-Cold War democratization and globalization on the rise, domestic actors have an increasingly important role to play in national decision-making and traditional foreign policy debates. This change entails new threats but also presents new opportunities for ensuring international water security.

International Water Security

China has recently emerged as one of Africa's top business partners, aggressively pursuing its raw materials and establishing a mighty presence in the continent's booming construction market. Among major foreign investors in Africa, China has stirred the most fear, hope, and controversy. For many, the specter of a Chinese neocolonial scramble is looming, while for others China is Africa's best chance at economic renewal. Yet, global debates about China in Africa have been based more on rhetoric than on empirical evidence. Ching Kwan Lee's *The Specter of Global China* is the first comparative ethnographic study that addresses the critical question: Is Chinese capital a different kind of capital? Offering the clearest look yet at China's state-driven investment in Africa, this book is rooted in six years of extensive fieldwork in copper mines and construction sites in Zambia, Africa's copper giant. Lee shadowed Chinese, Indian, and South African managers in underground mines, interviewed Zambian miners and construction workers, and worked
