N-BOD2 User's and Programmer's Manual H. P. Frisch, 1978 A general purpose digital computer program was developed and
designed to aid in the analysis of spacecraft attitude dynamics The program provides the analyst with the capability of
automatically deriving and numerically solving the equations of motion of any system that can be modeled as a topological
tree of coupled rigid bodies flexible bodies point masses and symmetrical momentum wheels Two modes of output are
available The composite system equations of motion may be outputted on a line printer in a symbolic form that may be easily
translated into common vector dyadic notation or the composite system equations of motion may be solved numerically and
any desirable set of system state variables outputted as a function of time **NASA Scientific and Technical**

Huang, Shichang Liu, Peng Zhang, Jiankai Yu, 2024-04-01 Future space missions and deep sea explorations will require small
micro nuclear reactors kWe MWe for power generation Compared with conventional energy systems such as storage
batteries and fossil energy nuclear reactors are featured higher energy intensity higher reliability and longer lifetime
According to the coolant the candidate small micro nuclear reactors include the heat pipe cooled reactor liquid metal cooled
reactor and gas cooled reactor most of which are still in the conceptual design stage with numerical studies and
experimental research These emerging reactors have an entirely different core structure and working principle from the
existing light water reactors which has led to an increasing need for updated simulation methods and experimental studies
