

### Quantum Optics: Interference

Consider a double-slit interference experiment setup as shown below.

- 1. The path difference between the two waves is  $\Delta x$ .
- 2. The path difference is  $\Delta x = d \sin \theta$ .
- 3. The path difference is  $\Delta x = d \sin \theta$ .
- 4. The path difference is  $\Delta x = d \sin \theta$ .

#### Condition for Constructive Interference

Constructive interference occurs when the path difference between the two waves is an integer multiple of the wavelength  $\lambda$ . This results in the waves being in phase, leading to a maximum in intensity. The condition for constructive interference is given by:

$$d \sin \theta = m \lambda$$

#### Condition for Destructive Interference

- 1. The path difference is  $\Delta x = d \sin \theta$ .
- 2. The path difference is  $\Delta x = d \sin \theta$ .
- 3. The path difference is  $\Delta x = d \sin \theta$ .
- 4. The path difference is  $\Delta x = d \sin \theta$ .
- 5. The path difference is  $\Delta x = d \sin \theta$ .

Consider a double-slit interference experiment setup as shown above. The distance between the slits is  $d$ , the distance to the screen is  $L$ , and the wavelength of the light is  $\lambda$ . The condition for constructive interference is given by:

$$d \sin \theta = m \lambda$$
